## Cover

### Montreal militia button

When faced with shortages of official coinage, Canada's early citizens resorted to a variety of novel substitutes such as playing cards, paper I.O.U.s, and even brass buttons. This month's cover features one such button used during the late 18th and early 19th centuries.

At that time Canada produced no coinage of its own, so people accepted whatever tokens and foreign coins were available. As the supply was insufficient for the demands of the growing colony, some individuals supplemented their holdings.

Among soldiers constantly trying to stretch their pay, buttons were a favourite substitute for coins. Typically, the shank was removed from the back and the button was flattened before being placed into circulation. A wide variety of these pieces from various British and Canadian regiments are known to have been used in this manner. Most of these buttons were displaced from circulation in the late 1830s when large quantities of heavier bank tokens were introduced.

The button shown on the cover was struck for the Montreal militia – the largest of five district militias in Lower Canada following the War of 1812. It bears the simple incuse legend "Montreal British Militia," was struck in brass and originally finished in gilt. The button is about the size of a British half-penny and would have passed as its equivalent.

This piece forms part of the National Currency Collection, Bank of Canada. Photography by James Zagon, Ottawa.

## Couverture

### Bouton d'uniforme de la milice de Montréal

Pour faire face aux pénuries de monnaie officielle, les anciens Canadiens eurent recours à des succédanés tels que des cartes à jouer, des reconnaissances de dette écrites sur des bouts de papier et même des boutons de laiton. La couverture de la revue de ce mois représente un de ces boutons, utilisés de la fin du XVIII<sup>e</sup> au début du XIX<sup>e</sup> siècle.

À cette époque, le Canada ne frappant pas sa propre monnaie, la population utilisait toutes les pièces et tous les jetons étrangers en circulation. Or, comme l'offre de telles pièces ne suffisait pas à satisfaire les besoins d'une colonie en pleine expansion, certains particuliers y suppléèrent en créant leur propre monnaie.

Ainsi les militaires, qui avaient constamment besoin d'argent, utilisèrent souvent des boutons d'uniforme en guise de pièces de monnaie. Ils avaient coutume de retirer la queue du bouton, qu'ils aplatissaient avant de le mettre en circulation. Une vaste gamme de boutons d'uniformes de divers régiments britanniques et canadiens furent ainsi utilisés. La plupart d'entre eux disparurent vers la fin des années 1830, à l'apparition de grandes quantités de jetons de banque plus lourds.

Le bouton reproduit en page couverture fut frappé pour la milice de Montréal, la plus grosse des cinq milices de district du Bas-Canada après la Guerre de 1812. Ce bouton de laiton initialement doré porte simplement la légende gravée en creux "Montreal British Militia". Il est à peu près de la taille et aurait été de la valeur d'un demi-penny britannique.

Cette pièce fait partie de la Collection nationale de monnaies, Banque du Canada. Photographie : James Zagon, Ottawa.

# Economic developments in Canada in the first half of 1990

- *At the end of 1989, the level of activity in the Canadian economy remained high, even though spending growth had moderated over the course of the year. Aggregate demand, as estimated by the preliminary national income and expenditure accounts, was virtually flat in the first half of 1990 and indeed fell in the second quarter. Correspondingly, the aggregate capacity utilization rate has eased.*
- *The estimated weakening of aggregate demand was most evident in those components of demand that are more sensitive to interest rates.*
- *Measured inflation eased somewhat but cost pressures remained strong.*
- *At the sectoral level, output declined in the goods-producing sector, while continuing until quite recently to grow in the services-producing sector.*
- *The second part of this article places recent developments in the goods-producing and services-producing sectors in a longer-term perspective. On the production side, the share of the services-producing sector in total output has been increasing since the early 1960s, as the importance of industries producing business services has increased. On the expenditure side, in contrast, the share of services in total expenditures at the level of final demand has not increased and has in fact been rather stable. In addition, output growth in the services sector has tended to be more stable than in the goods sector. Recent developments are not unusual compared to previous cyclical experience.*

*This article was prepared in the Research Department.*

# L'évolution économique au Canada au premier semestre de 1990

- *À la fin de 1989, le niveau de l'activité économique au Canada était encore élevé, malgré un ralentissement du rythme d'accroissement de la dépense dans le courant de l'année. La demande globale, d'après les estimations obtenues à partir des chiffres provisoires des comptes nationaux des revenus et des dépenses, n'a à peu près pas augmenté au premier semestre de 1990, accusant même une baisse au deuxième trimestre. Aussi le taux global d'utilisation des capacités a-t-il diminué.*
- *Le fléchissement estimé de la demande globale a surtout touché les composantes qui sont assez sensibles à l'évolution des taux d'intérêt.*
- *L'inflation mesurée s'est quelque peu atténuée, mais les pressions exercées par les coûts sont demeurées vigoureuses.*
- *Sur le plan sectoriel, le secteur des biens a vu sa production diminuer, tandis que celui des services poursuivait sa croissance jusqu'à une date assez récente.*
- *Dans la deuxième partie de l'article, l'évolution récente du secteur des biens et de celui des services est examinée dans une perspective à plus long terme. La part du secteur des services dans la production globale augmente depuis le début des années 60, à la faveur de l'importance accrue prise par le secteur des services aux entreprises. Par contre, la part que les services représentent dans la dépense globale au stade de la demande finale ne s'est pas accrue et, en fait, est restée assez stable. De plus, la croissance de la production a généralement été plus stable dans le secteur des services que dans celui des biens. L'évolution récente ne se démarque pas du profil observé lors des cycles antérieurs.*

*Cet article a été rédigé au département des Recherches.*

## Demand and economic activity

Total dollar spending in the Canadian economy is estimated to have risen by just over 3.0 per cent in the first half of 1990,<sup>1</sup> down substantially from an increase of just above 7 per cent through 1989. Aggregate demand in volume terms was virtually flat, compared to an increase of about 3 per cent in the four quarters ending in 1989 (Charts I and II). Indeed, aggregate demand fell by 1.6 per cent (expressed at a compound annual rate) in the second quarter of 1990. Correspondingly, the rate of resource use in product markets, which was tight in 1989, has eased. Domestic demand fell in the first half of the year, with the largest declines being experienced by those components of demand that are more sensitive to interest rates.

<sup>1</sup> Growth rates for the first half of the year are calculated as the increase from the fourth quarter of 1989 to the second quarter of 1990, expressed at an annual rate.

## La demande et l'activité économique

Selon les estimations, la dépense nominale globale a progressé d'un peu plus de 3 % au Canada au premier semestre de 1990<sup>1</sup>, en ralentissement sensible par rapport à la hausse d'un peu plus de 7 % enregistrée en 1989. En volume, la demande globale n'a presque pas varié, alors qu'elle avait augmenté d'environ 3 % au cours de la période de quatre trimestres s'étant terminée à la fin de 1989 (Graphiques I et II). En fait, elle a régressé de 1,6 % (taux annuel composé) au deuxième trimestre de 1990. Aussi le taux d'utilisation des ressources, qui était élevé en 1989, a-t-il diminué sur les marchés des biens et services. La demande intérieure a reculé au premier semestre de 1990, les baisses les plus accentuées ayant été enregistrées par les composantes particulièrement sensibles à l'évolution des taux d'intérêt.

<sup>1</sup> Les taux de croissance indiqués pour le premier semestre correspondent à la hausse, exprimée en taux annuel, enregistrée entre le dernier trimestre de 1989 et le deuxième trimestre de 1990.

### *Components of aggregate demand*

The volume of consumer expenditures fell by one-half of a percentage point in the first half of the year, compared to an increase of 3.6 per cent during 1989. The growth of disposable income was unusually low, owing to a large increase in personal income taxes. In fact, disposable income fell in the second quarter as personal income tax payments for the 1989 taxation year were unusually high, reflecting the impact of measures introduced in the 1989 federal and provincial budgets. Among the individual components of consumption, there was a particularly large decline in outlays on automobiles and other interest-sensitive durable goods in the second quarter of 1990. Lower energy consumption during the unusually warm months of January and February also contributed to the reduced pace of expenditure growth.

Expenditures in the housing market declined noticeably in the second quarter of the year, owing to rising debt levels, higher mortgage rates and continuing high prices in many metropolitan areas in British Columbia, Alberta and Ontario. The volume of sales of existing housing fell substantially in most regions of the country. Housing starts, while remaining at a high level in the first quarter, began to decline in the second quarter.

Business fixed investment, after adjustment for price changes, also experienced a pronounced decline in the second quarter of 1990, following a small increase in the first quarter. Outlays for machinery and equipment fell by just over 9 per cent in the first half of 1990. In contrast, non-residential construction expenditure was up by nearly 4 per cent with strong spending in energy-related industries, in part reflecting optimistic expectations regarding energy prices. Statistics Canada's mid-year survey of business investment intentions had indicated that current dollar capital expenditures would increase by nearly 10 per cent in 1990 (Chart III). While actual spending on business investment typically falls below planned outlays in periods of slow growth in aggregate demand, the pace of investment in the first half of the year, if it were to continue, would imply quite a substantial underrealization of mid-year intentions.

The decline in the level of domestic demand in the first half of 1990 has been reflected in slower growth of imports, especially of machinery and equipment and industrial materials. On the other

### *Les composantes de la demande globale*

Les dépenses de consommation en volume ont baissé d'un demi-point de pourcentage au premier semestre de 1990, alors qu'elles avaient augmenté de 3,6 % en 1989. La progression du revenu disponible a été particulièrement faible à cause d'une forte hausse de l'impôt sur le revenu des particuliers. En fait, le revenu disponible a baissé au deuxième trimestre, les versements d'impôt des particuliers pour 1989 ayant été plus élevés que de coutume en raison des mesures annoncées dans les budgets fédéral et provinciaux de 1989. Parmi les postes de dépense à la consommation, les achats d'automobiles et d'autres biens durables dont la demande est sensible aux variations des taux d'intérêt ont accusé un repli particulièrement marqué au deuxième trimestre de 1990. Une baisse de la consommation d'énergie, survenue durant les mois exceptionnellement doux de janvier et de février, a également contribué au ralentissement des dépenses de consommation.

Sur le marché du logement, les dépenses ont sensiblement diminué au deuxième trimestre sous l'effet de l'endettement croissant, de la montée des taux d'intérêt hypothécaires et de la persistance de prix élevés dans nombre de zones urbaines de la Colombie-Britannique, de l'Alberta et de l'Ontario. Les ventes de maisons existantes ont considérablement chuté en volume dans la plupart des régions. Quant aux mises en chantier de logements, si elles se sont maintenues à un niveau élevé au premier trimestre, elles ont amorcé un déclin au trimestre suivant.

Les investissements fixes des entreprises, correction faite des variations de prix, ont eux aussi subi une diminution sensible au deuxième trimestre de 1990, après s'être légèrement accrus au premier trimestre. Les dépenses en outillage et équipement ont baissé d'un peu plus de 9 % au premier semestre. En revanche, les dépenses consacrées à la construction non résidentielle ont augmenté de près de 4 % et ont été vigoureuses dans les industries de l'énergie, ce qui s'explique notamment par l'optimisme que suscite l'évolution des prix de l'énergie. L'enquête menée en milieu d'année par Statistique Canada sur les intentions d'investissement des entreprises avait prédit pour 1990 une augmentation de près de 10 % des dépenses d'investissement en dollars courants (Graphique III). Certes, en période de faible croissance de la demande globale, les entreprises n'investissent habituellement pas autant qu'elles l'avaient escompté, mais, si le rythme d'investissement observé au premier semestre devait se maintenir, il en résulterait un écart négatif assez appréciable par rapport aux intentions affichées en milieu d'année.

Le tassement de la demande intérieure au premier semestre de 1990 s'est répercuté sur les importations, dont le ralentissement a été particulièrement

Public and private investment  
 Investissements des secteurs public et privé

hand, export growth, after declining substantially during 1989, rose sharply in the first half of 1990. With the recovery of crop yields in 1989 from the effects of the 1988 drought, wheat exports have grown strongly in 1990 from low levels in 1989. Increased exports of motor vehicles and parts resulted from a recovery in car sales in the United States in the first half of 1990 and from efforts by North American dealerships to accumulate stocks in anticipation of a possible strike this fall. In contrast, exports of metals and minerals and of lumber fell substantially, reflecting further softening of U.S. demand and a less competitive cost position for many Canadian producers.

There was little change in the stock-to-sales ratio in the first half of 1990, as firms remained cautious concerning inventory levels (Chart IV). Indeed, there are few signs of the inventory buildups that have preceded and accentuated most downturns in production in the past.

marqué au chapitre de l'outillage et de l'équipement ainsi que des matières industrielles. Par contre, la progression des exportations, après un net fléchissement en 1989, s'est considérablement renforcée au premier semestre de 1990. La production agricole s'étant relevée en 1989 des effets de la sécheresse qui avait sévi l'année précédente, les exportations de blé se sont accrues vigoureusement en 1990 par rapport aux bas niveaux observés l'an dernier. Quant à la hausse des exportations d'automobiles et de pièces détachées, elle s'explique par la relance des ventes d'automobiles aux États-Unis au premier semestre de 1990 et les efforts de stockage déployés par les concessionnaires des marques nord-américaines en prévision d'une grève éventuelle cet automne. Les exportations de métaux, de minéraux et de bois d'oeuvre ont par contre accusé un repli sensible à cause d'un nouvel effritement de la demande aux États-Unis et d'une dégradation de la position concurrentielle d'un grand nombre de producteurs canadiens.

Le ratio Stocks/Ventes n'a guère varié au premier semestre, les entreprises restant prudentes dans la gestion de leurs stocks (Graphique IV). En fait, les

(1) Sales = purchases of consumer goods + private fixed investment + exports of goods less imports of goods + government non-wage expenditures

(1) Ventes = achats de biens de consommation + investissements fixes du secteur privé + exportations nettes de biens + dépenses non salariales du secteur public

### Output and employment

Output, as measured by real gross domestic product (GDP) at factor cost, was also virtually flat in the first half of 1990. In particular, there were declines in output in manufacturing, trade and finance and real estate – sectors especially sensitive to interest rate or exchange rate changes. While capacity pressures continued to ease, the rate of use of productive capacity for the aggregate of non-farm, goods-producing industries remained above its long-run average (Chart V).

Employment growth slowed in the first half of 1990, largely because of a decline in the manufacturing sector. This latter development was consistent with a fall in output and a substantial decline in profitability in manufacturing. However, with the labour force growing even more slowly than employment, labour markets remained fairly tight, and by the end of the second quarter the national unemployment rate was slightly lower than at the end of

indices d'accumulation de stocks, tels que ceux qui avaient précédé et amplifié la plupart des mouvements antérieurs de baisse de la production, sont plutôt rares.

### La production et l'emploi

La production mesurée par le PIB réel au coût des facteurs a elle aussi été virtuellement inchangée au premier semestre de 1990. La production a en fait diminué dans les secteurs de la fabrication, du commerce ainsi que de la finance et de l'immobilier, lesquels sont particulièrement sensibles à l'évolution des taux d'intérêt et du taux de change. Bien que les contraintes de capacité aient continué de s'atténuer, le taux d'utilisation des capacités de production est demeuré supérieur à son niveau moyen de long terme pour l'ensemble des industries productrices de biens non agricoles (Graphique V).

La progression de l'emploi s'est ralentie au premier semestre, en grande partie sous l'effet d'une contraction dans le secteur de la fabrication. Cette contraction est compatible avec une baisse de la production et une diminution sensible de la

1989<sup>2</sup> (Chart VI). The employment ratio, another indicator of labour market conditions, remained near a record high. On a regional basis, employment growth was above the national average in Quebec and the Prairie provinces, while the level of employment fell in Ontario.

### Inflation and costs

Over the first half of the year, consumer price inflation eased somewhat. In June, the consumer price index (CPI) stood 4.3 per cent above its level in June 1989, down from a corresponding 12-month increase of 5.3 per cent in June 1989 (Chart VII). On the same basis, the CPI excluding food and energy was up by 4.1 per cent in June, nearly 2 percentage points lower than recorded in mid-1989.<sup>3</sup> A major factor in this decline was

rentabilité dans ce secteur. Cependant, comme la population active a augmenté encore plus lentement que l'emploi, les marchés du travail sont restés relativement tendus de sorte que, vers la fin du deuxième trimestre, le taux de chômage à l'échelle nationale était en légère baisse par rapport à la fin de 1989<sup>2</sup> (Graphique VI). Le taux d'emploi, autre indicateur de la conjoncture du marché du travail, est demeuré voisin de son niveau record. Sur le plan régional, le nombre d'emplois a augmenté plus rapidement au Québec et dans les provinces des Prairies qu'à l'échelle nationale, tandis qu'il a diminué en Ontario.

### L'inflation et les coûts

La hausse des prix à la consommation s'est quelque peu ralentie au premier semestre. En juin, l'indice des prix à la consommation (IPC) s'établissait à 4,3 % au-dessus du niveau atteint douze mois auparavant, en baisse par rapport à l'accroissement de 5,3 % enregistré au cours de la période de douze mois s'étant terminée en juin 1989 (Graphique VII). L'IPC hors alimentation et énergie enregistrait sur la même base une hausse de 4,1 % en juin, ce taux étant de près

<sup>2</sup> The national unemployment rate rose by 0.3 percentage points to 7.8 per cent in July and by a further 0.5 percentage points to 8.3 per cent in August.

<sup>3</sup> However, the CPI excluding food and energy rose by 0.6 per cent in July, compared to an average monthly increase of about 0.3 per cent over the previous three months.

<sup>2</sup> Le taux de chômage au niveau national a augmenté de 0,3 point de pourcentage pour atteindre 7,8 % en juillet, puis de 0,5 point de pourcentage pour atteindre 8,3 % en août.

the elimination from the calculation of the effects of indirect tax changes introduced in federal and provincial budgets last year. Secondly, there was a substantial increase in price discounting of consumer durable and semi-durable goods, especially in the second quarter, as retailers sought to sustain sales and to avoid increases in stocks. Since the profit margins of firms producing and retailing these goods are low, further reductions in inflation arising from additional discounting are unlikely without some easing of cost pressures.

There was little change in regional differences in consumer price inflation in the first half of 1990. The inflation rate in most of the western provinces for the twelve months ending in June 1990 was at or above the national average, while in Ontario and the Atlantic provinces it was close to the national average. Quebec continued to record one of the lower annual rates of increase in consumer prices.

Canadian dollar commodity prices tended to stabilize in the

de deux points de pourcentage inférieur à l'augmentation observée au milieu de 1989<sup>3</sup>. Ce ralentissement est dû en grande partie à l'élimination, dans les calculs, de l'effet des modifications à l'impôt indirect instituées l'an dernier dans les budgets fédéral et provinciaux. On a également vu s'accroître sensiblement les rabais offerts par les détaillants de biens de consommation durables et semi-durables, notamment au deuxième trimestre, ces derniers cherchant à maintenir leurs ventes et à éviter un gonflement des stocks. Comme les marges bénéficiaires des entreprises qui produisent ou vendent ces biens sont faibles, il est peu probable que d'autres rabais viendront entraîner une nouvelle réduction de l'inflation sans une atténuation des pressions exercées par les coûts.

Les écarts observés entre régions au chapitre de la hausse des prix à la consommation n'ont guère varié au premier semestre. Dans la plupart des provinces de l'Ouest, le taux d'inflation a été égal ou supérieur à la moyenne nationale au cours de la période de douze mois s'étant terminée en juin 1990, tandis qu'il était voisin de cette moyenne en Ontario et dans les provinces de

<sup>3</sup> L'IPC hors alimentation et énergie s'est toutefois accru de 0,6 % en juillet, comparativement à une hausse mensuelle moyenne d'environ 0,3 % au cours des trois mois précédents.

Year-over-year percentage change  
 Taux de variation d'une année à l'autre

Year-over-year percentage change  
 Taux de variation d'une année à l'autre

first half of 1990, after falling over the course of 1989 owing in large measure to an appreciation of the Canadian dollar (Chart VIII). World commodity prices were essentially unchanged in the first half of the year, as was the exchange rate against a basket of currencies. Industrial product prices, export prices and the terms of trade (the ratio of export prices to import prices) were all affected by this development and in turn contributed to a stabilization of the growth rate of the GDP fixed-weight price deflator, one of the broadest measures of prices of goods and services produced in Canada. This latter measure of inflation had declined through 1989, largely as a result of some easing in the terms of trade.

After increasing sharply in 1989, the rate of growth of wage costs began to stabilize in the first half of 1990 (Chart IX). However, wage pressures remained substantial. Increases in unionized base wage rates in the first half of 1990 averaged just over 5.5 per cent, compared to just under 6 per cent in the second half of 1989. This reflected the fact that an unusually large proportion of settlements were in Quebec, where base wage rate

l'Atlantique. Le Québec a continué d'enregistrer l'un des plus faibles taux annuels de progression des prix à la consommation.

Les cours en dollars canadiens des produits de base se sont généralement stabilisés au premier semestre de 1990, après avoir fléchi en 1989 en raison, surtout, du renforcement du cours du dollar canadien (Graphique VIII). Les cours mondiaux de ces produits n'ont à peu près pas varié au premier semestre, tout comme le cours du dollar canadien par rapport à un panier de devises. Cette situation a influé sur les prix des produits industriels, les prix à l'exportation et les termes de l'échange (rapport entre les prix à l'exportation et à l'importation), qui ont eux-mêmes contribué à stabiliser le taux de croissance de l'indice implicite du PIB à pondérations fixes, l'un des plus larges indices de prix des biens et services produits au Canada. Cet indicateur de l'inflation a diminué tout au long de 1989, en bonne partie à cause d'une certaine amélioration des termes de l'échange.

Après s'être fortement accéléré en 1989, le taux de croissance des coûts salariaux a commencé à se stabiliser au premier semestre de 1990 (Graphique IX). Les pressions salariales sont toutefois demeurées assez vives. Les hausses des taux salariaux de base dans le secteur syndiqué ont été en moyenne d'un peu plus de 5,5 % au premier semestre de 1990, contre un peu

increases have generally been lower than average. Overall, settlements in Ontario and British Columbia were higher than in the rest of the country. The rate of increase in a fixed-weight measure of average hourly earnings<sup>4</sup> stabilized in the first half. In contrast, the growth of total labour income per worker increased to over 7.5 per cent, owing in part to an increase in the employer contribution rate for unemployment insurance, a new Ontario Employer Health Tax and large retroactive wage payments in the public sector in the second quarter.

## The good and services sectors: A longer-term perspective

Much attention has been given recently to the contrast in economic performance between the goods-producing and services-producing sectors.<sup>5</sup> Output in the goods-producing sector has declined by nearly 1 per cent since the third quarter of 1989, while output in the services-producing sector has continued to grow until quite recently. In this section, these developments are evaluated in the context of structural trends in the two sectors and previous cyclical experience.

### Structural trends

The share of the goods sector in current dollar gross domestic product has fallen since the early 1960s<sup>6</sup> (Chart X). This phenomenon reflects both a decrease in the share of the goods-

moins de 6 % au second semestre de 1989. Cela est dû au fait que les accords salariaux ont été, dans une proportion plus grande que d'habitude, conclus au Québec, où les taux salariaux de base ont généralement augmenté moins vite qu'à l'échelle nationale. Dans l'ensemble, les hausses salariales accordées en Ontario et en Colombie-Britannique ont été plus fortes que dans le reste du pays. Le taux d'accroissement d'un indicateur à pondérations fixes des gains horaires moyens<sup>4</sup> s'est stabilisé au premier semestre. Par contre, la progression du revenu total du travail par travailleur est passée à plus de 7,5 %, sous l'influence notamment d'une majoration du taux de cotisation patronale à l'assurance-chômage, du nouvel impôt-santé prélevé sur les employeurs en Ontario et d'importants versements salariaux rétroactifs dans le secteur public au deuxième trimestre.

\* \* \*

## Les secteurs de la production des biens et des services dans une perspective à long terme

On s'est beaucoup intéressé récemment aux différences que présentent le secteur de la production des biens et celui des services au chapitre des résultats économiques<sup>5</sup>. La production a reculé de près de 1 % dans le premier depuis le troisième trimestre de 1989, tandis que, dans le second, elle continuait de progresser jusqu'à une date assez récente. Dans la présente section, nous évaluons cette évolution en la plaçant dans le contexte des tendances structurelles enregistrées dans les deux secteurs et des observations recueillies lors des cycles précédents.

### Les tendances structurelles

La part du secteur des biens dans le produit intérieur brut en dollars courants est en régression depuis le début des années 60<sup>6</sup> (Graphique X). Ce phénomène est dû tant à la perte d'importance relative de ce secteur dans la production

<sup>4</sup> The fixed-weight measure of average hourly earnings removes the effects of changes in average hourly earnings arising from compositional shifts of higher- or lower-paid employees between industries or regions or between salaried and hourly-paid groupings. These data are published monthly in Statistics Canada, *Canadian Economic Observer*, (11-010).

<sup>5</sup> The goods-producing sector comprises agriculture, fishing and trapping, mining, manufacturing, construction, and electric power and other utilities. The services-producing sector includes such industries as transportation, communications, trade, and business services.

<sup>6</sup> The data reported in the text are based on the input-output tables. Information based on a compilation of industry census data suggests that the share of the goods-producing sector in current dollar gross domestic product also fell between 1926 and 1960.

<sup>4</sup> L'indicateur à pondérations fixes des gains horaires moyens supprime les effets des variations de ces gains découlant des changements de répartition des salariés plus ou moins bien rémunérés entre les branches d'activité ou les régions, ou encore entre les employés rémunérés sur base annuelle et le personnel rémunéré à l'heure. Ces chiffres sont publiés chaque mois dans *L'Observateur économique canadien* de Statistique Canada (publication n° 11-010 au catalogue).

<sup>5</sup> Le secteur des biens regroupe l'agriculture, la pêche et le piégeage, l'extraction minière, la fabrication, la construction, l'électricité et les autres services d'utilité publique. Le secteur des services comprend entre autres les transports, les communications, le commerce et les services aux entreprises.

<sup>6</sup> Les chiffres fournis dans cette section sont tirés des tableaux entrées-sorties. Les données recueillies lors des recensements effectués auprès des branches d'activité portent à croire que le secteur des biens a également vu sa part diminuer dans le produit intérieur brut en dollars courants de 1926 à 1960.

Per cent  
En pourcentage

producing sector in aggregate output and a decline in the prices of goods relative to the prices of services. Economic activity has been shifting from agriculture and mining to those industries producing services for other firms. There has been a pronounced trend in recent years towards splitting off services used in goods production to outside contracts, for a number of reasons related to taxation and the regulatory environment, as well as other cost considerations. For example, it seems that goods-producing firms have increasingly contracted out legal and other professional business services in the past 10 years.

The rise in the output share of the services-producing sector is not the result of increased spending on services at the level of final demand. In fact, the share of spending on services<sup>7</sup> in aggregate spending, adjusted for price changes, has been fairly stable since the early 1960s (Chart XI), even though the relative price of services has been increasing.

globale qu'aux baisses de prix enregistrées par les biens par rapport aux services. L'activité économique s'est déplacée des secteurs de l'agriculture et de l'extraction minière vers les branches d'activité offrant des services aux autres entreprises. On a observé ces dernières années une tendance très forte de la part des entreprises productrices de biens à sous-traiter l'exécution de certains services pour un certain nombre de raisons d'ordre fiscal et réglementaire et pour d'autres raisons liées aux coûts. À titre d'exemple, il semble que, au cours des dix dernières années, elles aient conclu avec des sous-traitants un nombre accru de contrats de services juridiques et d'autres services professionnels.

L'augmentation de la part du secteur des services dans la production totale ne découle pas d'une hausse des dépenses consacrées à l'acquisition de services au stade de la demande finale. En fait, la proportion que constituent les services dans la dépense globale<sup>7</sup>, après correction des variations de prix, est relativement stable depuis le début des années 60 (Graphique XI), même si le prix relatif des services est allé en s'accroissant.

Depuis le début des années 60, le prix des biens de consommation a baissé

<sup>7</sup> Spending on services includes consumer spending on services, government spending on goods and services, and net exports of services.

<sup>7</sup> Les dépenses consacrées aux services comprennent les achats de services par les consommateurs, les dépenses publiques en biens et services et les exportations nettes de services.

The price level of consumer goods relative to consumer services has been falling by about 0.6 per cent per year on average since the early 1960s. Labour productivity in the business goods-producing sector<sup>8</sup> has been increasing at an average annual rate that is just over 1 per cent higher than in the business services-producing sector (Chart XII), a development which helps explain the fall in the relative price of consumer goods. Further, over the past 30 years, labour compensation in the business goods-producing sector has been rising by just under 1 percentage point per year more quickly than in the business services-producing sector.<sup>9</sup>

Another implication of higher labour productivity growth in goods-producing activities is that the demand for labour has tended to increase more rapidly in service industries (Chart XIII). Technical progress has had more impact on the goods sector than on many services-producing industries.<sup>10</sup>

### Cyclical characteristics

The growth of output during business cycles has tended to be more stable in the services sector than in the goods sector. In cyclical expansions, output has usually grown less rapidly in the services sector. Correspondingly, in cyclical slowdowns goods-sector output grows considerably more slowly or even declines, while output growth in the services sector has often fallen only moderately.

Cyclical fluctuations in aggregate demand tend to be concentrated in those components of expenditure that are postponeable, such as consumer durables and residential construction, and hence have a greater effect on the goods sector. As well, production in a large part of the goods sector is intrinsically postponeable, because demand is met initially from

d'environ 0,6 % par année en moyenne par rapport au prix des services aux consommateurs. Dans le secteur des entreprises productrices de biens<sup>8</sup>, la productivité du travail a progressé à un rythme annuel moyen supérieur d'un peu plus de 1 % au rythme de croissance observé dans le secteur des entreprises productrices de services (Graphique XII); ce phénomène explique en partie la baisse du prix relatif des biens de consommation. En outre, au cours des trente dernières années, la hausse de la rémunération du travail dans le premier secteur a dépassé d'un peu moins d'un point de pourcentage par année l'augmentation enregistrée dans le second<sup>9</sup>.

La progression plus rapide de la productivité du travail dans le secteur de la production des biens a eu cette autre conséquence que la demande de main-d'oeuvre a eu tendance à augmenter plus vite dans le secteur des services (Graphique XIII). L'incidence du progrès technique a été plus grande dans le secteur des biens que dans un grand nombre d'activités de service<sup>10</sup>.

### Les aspects cycliques

L'expansion de la production au cours des cycles a été généralement plus constante dans le secteur des services que dans celui des biens. Lors des phases ascendantes des cycles, la production augmente habituellement moins vite dans le secteur des services. De même, dans les phases de ralentissement, la production augmente beaucoup moins rapidement et peut même diminuer dans le secteur des biens, tandis que dans les services la croissance ne fait généralement que marquer un ralentissement d'amplitude modérée.

Les variations cycliques de la demande globale tendent à toucher surtout les biens dont les achats sont susceptibles d'être reportés, par exemple les biens durables et les logements; le secteur des biens en subit donc davantage les contrecoups. De même, la production peut par nature être différée dans une bonne partie du secteur des biens, la demande étant satisfaite dans un premier temps à l'aide des stocks disponibles. Tel n'est pas le cas dans le secteur des services. En outre, comme les variations imprévues de la demande peuvent entraîner un écart entre les stocks effectifs et souhaités et que les variations des

<sup>8</sup> The business sector comprises all activity where the intent is to produce for a profit. In contrast, the non-business sector consists of non-market activity in which output must be measured in terms of input costs since there is no market measure of output.

<sup>9</sup> The estimates of labour productivity produced by Statistics Canada assume that the skill levels of all workers are the same. It might be the case that the average skill level of labour in different sectors of the economy improves at different rates, providing one reason why labour productivity and wages would grow at different rates across sectors.

<sup>10</sup> There are exceptions to this general trend, such as the communications sector. As well, there are severe measurement problems in some service industries, such as public administration. There is no market for the output of the government sector, so that output is measured as the cost of the inputs and hence there can be no measured change in labour productivity.

<sup>8</sup> Le secteur des entreprises regroupe toutes les activités à but lucratif. Les activités à but non lucratif sont les activités non marchandes dont la production doit être évaluée au coût des ressources utilisées, son prix ne pouvant être déterminé par le marché.

<sup>9</sup> Les estimations de la productivité du travail que produit Statistique Canada reposent sur l'hypothèse que les niveaux de compétence de tous les travailleurs sont identiques. Or, il se pourrait que le niveau moyen de compétence de la main-d'oeuvre s'améliore à un rythme différent selon les branches d'activité, ce qui serait l'une des raisons de la progression variable de la productivité du travail et des salaires selon les secteurs.

<sup>10</sup> Cette constatation générale souffre quelques exceptions, par exemple dans le secteur des communications. Il est également très difficile de mesurer certaines activités de service, comme celles de l'administration publique. Aucun marché ne permettant de mesurer la production du secteur public, celle-ci doit être exprimée en fonction du coût des ressources utilisées; il ne peut donc y avoir de variations mesurables de la productivité du travail.

Chart XIII

Share of total employment by selected sector

Graphique XIII Répartition de l'emploi entre quelques secteurs

inventories. Such is not the case in the services sector. Moreover, because unexpected changes in demand can move stocks away from desired levels and because the desired levels themselves tend to be procyclical, output cycles in goods-producing industries tend to be amplified by an inventory accelerator phenomenon.<sup>11</sup> As well, cyclical fluctuations in world commodity prices contribute to more instability of output among resource-producing industries. Another interesting cyclical characteristic is that downturns in output growth in the goods sector have often preceded those in the services sector.

Fluctuations in the inflation rate of prices for consumer services usually follow those for consumer goods inflation (Chart XIV). Inflation for consumer goods is normally more sensitive to external developments, such as oil and food price shocks or exchange rate fluctuations. Also, the inventory cycle tends to have

stocks souhaitées ont généralement tendance à évoluer dans le même sens que les phases du cycle, les cycles de production dans le secteur des biens sont habituellement amplifiés par le rôle d'accélérateur que jouent les stocks<sup>11</sup>. Notons aussi que les variations cycliques des cours mondiaux des produits de base contribuent à imprimer une plus grande instabilité à la production dans les industries d'exploitation de richesses naturelles. Autre caractéristique cyclique notable, le ralentissement du rythme de croissance de la production dans le secteur des biens précède souvent le ralentissement observé dans celui des services.

Le rythme d'augmentation des prix dans le secteur des services aux consommateurs varie habituellement avec un certain décalage par rapport au secteur des biens de consommation (Graphique XIV). Les prix des biens de consommation sont généralement plus sensibles aux influences extérieures, par exemple les variations des prix du pétrole ou des produits alimentaires, ou encore les fluctuations du taux de change. Le cycle des stocks tend également à

<sup>11</sup> Improvements in inventory control techniques undertaken in the past decade may have contributed to more stability in output growth over much of the 1980s.

<sup>12</sup> Les cycles de production dans le secteur des biens sont habituellement amplifiés par le rôle d'accélérateur que jouent les stocks. Notons aussi que les variations cycliques des cours mondiaux des produits de base contribuent à imprimer une plus grande instabilité à la production dans les industries d'exploitation de richesses naturelles.

Chart XIV Consumer price index  
Graphique XIV Indice des prix à la consommation

a counterpart in goods prices; for instance, firms will cut prices temporarily to clear unwanted stocks. However, the experience of the early 1980s demonstrates that prices for services are not insulated from general economic conditions and the inflation rate for services did eventually decline relative to its peak by about the same amount as the inflation rate for goods.

### Recent developments

As noted earlier, output and employment in goods-producing activities have been declining since the second half of 1989, in contrast to a more buoyant situation in services-producing activities. This article has pointed out that declines in the growth of aggregate spending tend to have both a larger and earlier effect on output and employment in the goods-producing sector. Further, the decline in real commodity prices since early 1989 has resulted in a reduction in profitability in many resource-based industries and has contributed to reducing the growth of output and employment in those goods-producing industries. However, the recent cyclical performance of the goods-producing sector is not unusual compared to previous experience.

The slowdown in the growth of aggregate inflation has been most evident in consumer goods excluding food and energy, which is consistent with the decline in activity among goods-producing industries. In contrast, the inflation rate for consumer services has only begun to decline in the second quarter of this year, lagging the slowing of the inflation rate for consumer goods and following a pattern noted for previous cycles.

se répercuter sur les prix des biens; par exemple, les entreprises réduiront temporairement leurs prix afin d'écouler les stocks excédentaires. Les observations du début des années 80 montrent cependant que les prix des services n'échappent pas à l'influence de la conjoncture économique générale et que leur rythme d'augmentation a finalement baissé, par rapport au sommet qu'il avait atteint, à peu près dans la même proportion que le taux d'inflation des biens.

### L'évolution récente

Comme on l'a vu, la production et l'emploi sont en recul dans le secteur des biens depuis le second semestre de 1989, tandis que le secteur des services manifeste plus de fermeté. Cet article a fait ressortir que, lorsque le rythme de croissance de la dépense globale ralentit, cela exerce généralement un effet plus marqué et plus rapide sur la production et l'emploi dans le secteur des biens. De plus, le fléchissement des prix réels des produits de base depuis le début de 1989 s'est soldé par une réduction de la rentabilité d'un grand nombre d'industries d'exploitation de richesses naturelles, contribuant à y réduire la croissance de la production et de l'emploi. Le comportement du secteur des biens au cours du cycle récent n'est toutefois pas inhabituel, compte tenu des observations faites lors de cycles antérieurs.

La décélération du rythme de croissance de l'inflation globale a été particulièrement manifeste au chapitre des biens de consommation, alimentation et énergie exclues, et cela a été compatible avec la baisse d'activité enregistrée dans le secteur des biens. Par contre, le taux d'inflation des services aux consommateurs n'a amorcé un ralentissement qu'au deuxième trimestre de l'année, bien après celui des biens de consommation, suivant en cela le profil observé pendant les cycles antérieurs.

## Issues and options in monetary policy and the control of inflation in emerging market-oriented economies

*Remarks by  
John W. Crow  
Governor of the Bank of Canada  
at a symposium on central banking issues  
in emerging market-oriented economies  
sponsored by the  
Federal Reserve Bank of Kansas City  
Jackson Hole, Wyoming  
24 August 1990*

As “presenter” for this session of the symposium I see my task as more to indicate than to prescribe. There are other reasons as well for a cautious approach. Even if one could claim to have a good understanding of the common features of the economies in question, the differences among them are also very important. It is therefore unlikely that any single prescription could satisfy all cases. And while I can claim a background in central banking, I can only claim a very great interest in the financial and economic transformations taking place across Central and Eastern Europe and the conditions under which central banks have to operate and establish a place for monetary policy.

Some overlap with other parts of the symposium is unavoidable. For example, we need to assume that in this morning’s first session, on the role of central banks, it was accepted that central banks will be provided with the tools necessary to conduct monetary policy in a way that (of course) gives central attention to monetary stability. Monetary stability can also be described as

## Questions et choix en matière de politique monétaire et de contrôle de l’inflation dans les économies de marché naissantes

*Allocution prononcée par  
John W. Crow  
gouverneur de la Banque du Canada  
à un colloque sur le rôle de la  
banque centrale dans les économies de marché naissantes  
organisé par  
la Banque fédérale de réserve de Kansas City  
Jackson Hole (Wyoming)  
le 24 août 1990*

En tant qu’animateur de cette séance, je compte davantage émettre des observations que prescrire des lignes de conduite. Mais la circonspection dont j’entends faire preuve se fonde aussi sur d’autres facteurs. Même en admettant qu’on puisse bien comprendre les caractéristiques communes des économies dont il est question ici, il reste que des différences marquées existent entre elles, aussi est-il peu probable qu’il existe une panacée universelle. Et s’il est vrai que je possède une certaine expérience des banques centrales, je ne puis que professer un très grand intérêt pour les transformations financières et économiques que connaissent les pays d’Europe centrale et d’Europe de l’Est, ainsi que pour les conditions dans lesquelles les banques centrales doivent y mener leurs opérations et ménager une place à la politique monétaire.

Il est inévitable que cette séance déborde quelque peu sur les autres sujets de ce colloque. Par exemple, nous devons supposer qu’au cours de la première séance de la matinée consacrée au rôle des banques centrales, on a accepté l’idée que ces dernières obtiendront les outils leur permettant de formuler la politique monétaire de manière à donner (bien entendu) le rôle prépondérant à la stabilité monétaire. La stabilité monétaire peut également être considérée

price stability or, in the possibly less demanding terms chosen for this session, as inflation control.

It is also worth highlighting at the outset the particular relevance of the fact that we are discussing monetary policy against the backdrop of “emerging market-oriented economies” – that is, economies emerging from the system of “material balancing,” under which quantities of inputs are made available administratively on the basis of estimated needs for fulfilling the production targets stemming from a central plan, and moving towards one where the price mechanism and competition in private markets play a major role in resource allocation.

In a market economy, monetary policy is transmitted above all through changing yields in financial markets. Until the transmission linkages – from the instruments of monetary policy to financial markets, and from financial markets to the rest of the economy – have developed, monetary policy as it is generally perceived is unlikely to be very effective. Conversely, while the general range of market reforms or creations under way are hardly being undertaken in order to improve the playing field for monetary policy, the better financial markets function, and the better they become linked to the market decisions of consumers and investors, the more effective monetary policy will be in getting macroeconomic results.

Another reason for emphasizing the shift towards market economies is that while inflation is bad news under any economic system, it is particularly bad for a decentralized, that is market, system. For this system, with its reliance on the price mechanism and monetary exchange, monetary stability is essential if market signals are going to be interpreted efficiently. In other words, to function well, a market economy depends on confidence in the money that is being used.

### **Broad approaches to establishing monetary confidence**

This section reviews the main ways in which monetary policy might be anchored so as to secure the credible performance necessary for monetary confidence.

Bearing in mind perhaps the debates in Western Europe over the exchange rate system, consideration needs to be given in this session to the merits of a fixed exchange rate as the anchor for

comme étant la stabilité des prix ou, pour reprendre l'appellation peut-être moins exigeante adoptée pour cette séance, comme le contrôle de l'inflation.

Avant de commencer, je tiens à souligner combien il est pertinent que notre débat sur la politique monétaire ait pour toile de fond « les économies de marché naissantes ». Ces économies, fondées jusqu'à tout récemment sur l'utilisation de la méthode des « balances matières » – en vertu de laquelle l'État répartit, sur la base de besoins estimatifs, les intrants nécessaires à la réalisation des objectifs de production établis par le plan –, s'orientent maintenant vers un système où le mécanisme des prix et le jeu de la concurrence sur les marchés privés jouent un grand rôle dans l'affectation des ressources.

Dans une économie de marché, les variations des taux de rendement sur les marchés financiers constituent la principale courroie de transmission de la politique monétaire. Tant que les canaux de transmission – entre, d'une part, les instruments de politique monétaire et les marchés financiers, et entre, d'autre part, ces derniers et les autres secteurs de – économie – ne seront pas bien établis, il est peu probable que la politique monétaire, au sens où nous l'entendons généralement, puisse avoir beaucoup d'effet. En revanche, même s'il est vrai que les diverses réformes et innovations en cours n'ont nullement pour but de faciliter l'action de la politique monétaire, mieux les marchés financiers fonctionneront et mieux ils réagiront aux décisions des consommateurs et des investisseurs, plus l'incidence de la politique monétaire se fera sentir sur le plan macroéconomique.

Une autre raison pour laquelle l'évolution vers l'économie de marché mérite d'être soulignée est que l'inflation, qui n'annonce jamais rien de bon quel que soit le système économique en place, se révèle particulièrement nocive dans un système décentralisé, c'est-à-dire qui se fonde sur les lois du marché. Dans un tel système, qui repose sur le mécanisme des prix et sur l'utilisation de la monnaie comme moyen d'échange, il est essentiel que la stabilité monétaire soit réalisée pour que les signaux du marché soient interprétés correctement. Autrement dit, le succès d'une économie de marché dépend de la confiance qu'inspire la monnaie qui y est utilisée.

### **Approches globales visant à favoriser la confiance dans la monnaie**

Dans cette partie de mon exposé, je passerai en revue les principales façons dont peut être orientée la politique monétaire pour que celle-ci jouisse de la crédibilité nécessaire à l'instauration d'un climat de confiance en la monnaie.

À la lumière peut-être des débats engagés en Europe de l'Ouest sur le régime

monetary stability. Such an approach would also entail an early decision to make the currency convertible in the foreign exchange market (at least for current if not right away for capital account transactions). Currency convertibility will also get a discussion all to itself later at this symposium.

For monetary policy, the crucial value of relying on a fixed exchange rate anchor is that it promises to deliver early credibility. It does this through explicitly locking onto a currency that already enjoys a good reputation for preserving its purchasing power. Credibility would be enhanced if it is likely that strong trading links will develop with the economy using the currency in question. In this context, the European Monetary System could be an obvious pole of attraction – either in the collective currency bundle, the ECU, or, conceivably, through its strongest constituent currency.

Still, arguments for not betting monetary policy on the exchange rate have considerable weight.

Reliance on the exchange rate (in effect on someone else's monetary policy) for monetary discipline, and therefore for confidence, means commitment to a fixed exchange rate that must be seen as unwavering if it is to be credible enough to shape price and cost decisions. Simply pegging the exchange rate may not by itself provide the necessary demonstration of commitment. Indeed, can anything less than some sort of monetary union be seen as “unwavering”? And practically speaking, monetary unions or EMS-type arrangements for monetary policy convergence look a fair way off at this point.

Fixing the exchange rate means that the discipline on domestic costs that is imposed by an unyielding exchange rate dominates other considerations regarding the role of the exchange rate – particularly the role of shifts in the nominal exchange rate in facilitating shifts in the *real* exchange rate (the exchange rate adjusted for relative rates of inflation) as a way of getting the economy to adjust efficiently to real economic changes.

As an illustration of the above point, it may be presumed that the terms of trade will shift as CMEA trade declines and new trading patterns emerge. More generally, relative prices will move, probably a great deal, under the impact of market transformation. It follows that the real exchange rate will likely have to move as

de taux de change, nous devons nous pencher ici sur les avantages d'un régime de taux de change fixes comme point d'ancrage de la stabilité monétaire. L'adoption d'un tel régime aurait pour corollaire immédiat l'établissement de la convertibilité des monnaies sur le marché des changes (du moins pour les opérations courantes, s'il s'avère impossible, dans un premier temps, d'appliquer cette décision aux mouvements de capitaux). La question de la convertibilité des monnaies est d'ailleurs abordée dans une autre séance de ce colloque.

Pour la politique monétaire, l'intérêt fondamental que présentent les parités fixes réside dans le fait qu'elles sont de nature à engendrer de la crédibilité à brève échéance. La raison en est que le pays qui adopte un tel régime lie explicitement sa monnaie à une autre devise dont le pouvoir d'achat est déjà reconnu comme très stable. Cette crédibilité sera accentuée s'il paraît probable que des liens commerciaux solides seront tissés avec le pays qui utilise la devise en question. Dans un tel contexte, le Système monétaire européen (SME) pourrait de toute évidence être un pôle d'attraction, à cause de l'Écu, le panier collectif de monnaies européennes, ou – ce qui serait concevable – de la monnaie la plus forte parmi les devises qui le composent.

Néanmoins, les arguments voulant que la politique monétaire ne doive pas être liée par le taux de change pèsent lourd dans la balance.

En effet, s'en remettre au taux de change (ou, en d'autres termes, à la politique monétaire d'un autre pays) pour instaurer la discipline monétaire, et donc la confiance, c'est prendre, à l'égard des parités fixes, un engagement dont le caractère inébranlable ne devra faire aucun doute si l'on veut qu'il influence les décisions concernant les prix et les coûts. Le simple fait de rattacher le taux de change à une autre monnaie pourrait ne pas suffire en soi à démontrer le sérieux de cet engagement. Mais existe-t-il un régime autre qu'une certaine forme d'union monétaire qui puisse être perçu comme étant « inébranlable »? Or, dans la pratique, l'établissement d'unions monétaires ou d'arrangements analogues au Système monétaire européen pour la coordination des mesures de politique monétaire semble peu probable pour le moment.

Dans un régime de changes fixes, la discipline qu'impose aux coûts intérieurs un taux de change inflexible l'emporte sur les autres rôles que ce prix peut jouer, en particulier celui d'induire un ajustement au moindre coût possible aux changements économiques réels par le jeu des effets que les variations du taux de change nominal ont sur l'évolution du taux de change *réel* (c'est-à-dire le taux de change corrigé en fonction des taux relatifs d'inflation).

Pour illustrer ce point, je ferai remarquer que l'on peut s'attendre à ce que les termes de l'échange des pays concernés se modifient à mesure que baissera le volume des échanges effectués sous l'égide du Conseil d'assistance économique

part of the general process of relative price adjustment. Without some flexibility in the nominal exchange rate, it may well not be possible to get anything approximating the necessary exchange rate shifts in real terms except at great economic cost in terms of foregone output and increased unemployment.

What about domestic indicators, guides and anchors?

In this area it does not seem likely that any clear-cut option would be available. One common approach from the domestic angle is to use monetary or credit aggregates as a way of plotting a path for monetary policy. However, in view of the economic and institutional transformations taking place, it seems unlikely that stable relationships to either spending or interest rates will be forthcoming any time soon.

Accordingly, the authorities might be well advised to adopt an eclectic approach to the use of domestic guides. An initial focus on an IMF-styled measure of maximum domestic credit expansion, grounded in the central bank's balance sheet, may well be called for. Whatever other monetary management decisions are implemented, in the prevailing economic and institutional flux the central bank will want to keep a close eye on the pace at which its own assets are expanding (more on this below).

The authorities will in any event want to monitor movements in any relatively broad indicators of prices that are available, as a gauge by which to adjust the thrust of monetary expansion. At the same time, in this period of structural change relative prices will be changing a great deal in all markets, and it may be difficult indeed in the shorter run to separate out the impact on the price level of changes in relative prices, from the impact originating in a process of general domestic cost and/or price inflation. How well relative cost or price changes can be distinguished from general movements in costs or prices will of course depend in part upon the quality of the cost and price measures. Developing satisfactory measures will therefore be a priority.

Even if monetary policy is not fully geared to the exchange rate, the balance of payments outturn in general, and exchange rate pressures in particular, can obviously also play a role in gauging the degree of demand and inflation pressure, and therefore in indicating a need to adjust the thrust of monetary policy. However, as in the case of price movements, in this area

mutuelle (CAEM) et que s'établiront de nouveaux courants commerciaux. De manière plus générale, les prix relatifs fluctueront, sans doute beaucoup, en réaction à la transformation que subiront les marchés. Par conséquent, il faudra probablement que le taux de change réel varie dans le processus général d'ajustement des prix relatifs. Faute d'une certaine souplesse du taux de change nominal, il est bien possible que les variations nécessaires du taux de change réel ne puissent être obtenues qu'au prix d'énormes sacrifices économiques au chapitre de la production et de l'emploi.

Mais qu'en est-il de l'utilisation d'indicateurs, de guides et de points d'ancrage nationaux?

De ce côté, il est peu probable qu'une solution précise existe. On utilise couramment, sur le plan intérieur, les agrégats monétaires ou les agrégats du crédit pour tracer la trajectoire de la politique monétaire. Toutefois, compte tenu des transformations économiques et institutionnelles en cours, il paraît improbable qu'une relation stable puisse être établie avant longtemps entre l'évolution de tels agrégats et la dépense ou les taux d'intérêt.

Par conséquent, les autorités auraient tout intérêt à adopter une approche éclectique dans leur utilisation d'indicateurs nationaux. Dans un premier temps, elles pourraient, à la manière du FMI, imposer un plafonnement de l'expansion du crédit intérieur qui serait fonction du bilan de la banque centrale du pays. Quelles que soient les autres mesures de politique monétaire adoptées, la banque centrale souhaitera, dans le contexte actuel de réforme économique et institutionnelle, observer attentivement le rythme auquel ses propres avoirs s'accroissent (j'aborderai de nouveau cette question plus loin).

Les autorités voudront néanmoins surveiller l'évolution de tous les indicateurs de prix au sens relativement large dont elles disposent, afin d'ajuster en conséquence le rythme d'expansion monétaire. Dans le même temps, en cette période de changements structurels, les prix relatifs fluctueront considérablement sur tous les marchés, et il pourra effectivement s'avérer difficile à court terme d'établir une distinction entre l'incidence des changements des prix relatifs sur le niveau des prix et les effets d'une inflation générale des coûts ou des prix intérieurs. Il va sans dire que la qualité des mesures utilisées déterminera en partie le degré d'exactitude avec lequel les variations des coûts ou des prix relatifs pourront être distinguées des mouvements généraux des coûts et des prix. La mise au point de mesures satisfaisantes constituera donc une priorité.

Même si la politique monétaire n'est pas entièrement axée sur le taux de change, l'évolution de la balance des paiements en général et les pressions du taux de change en particulier pourront aussi contribuer, de toute évidence, à

also it will be important to make distinctions – between on the one hand the effects of demand on the balance of payments and the exchange rate, and on the other the effects of influences of a structural nature.

The pace of increase of the general level of money incomes (conventionally called the money wage rate) is clearly of great relevance in terms of the possibilities for inflation control. However, it may be relevant not so much because of its sensitivity to demand pressures, but more especially because of its cost and price push features in a particular institutional context. These features could call for other forms of restraint as a complement to monetary restraint – not as a way of life in a market-based economy but in the initial stages of economic stabilization. In this way the money wage rate could act as a temporary nominal anchor alongside any available guides that are more directly linked to the monetary process. In this context, the Polish experience to date will be of interest. There, wages (on the basis of a tax-based incomes policy) apparently serve as the nominal anchor, reinforced to some degree by a fixed exchange rate.

### **Building the foundations**

Evidently, a great deal of institution building (beyond the questions relating to central bank structure and powers that were presumably covered earlier this morning) will have to occur before the economies in question can use monetary policy in the market-based way that is available elsewhere.

No doubt a major priority at the start is to establish a market-oriented system of deposit gathering and commercial credit extensions – the traditional field of commercial banking. But also, more generally, the authorities will wish to encourage greater competition in the financial markets, to channel savings to their most productive uses. Within the OECD this objective has been met both by systems in which banks play a dominant role (the continental European model) and by systems in which marketable securities are also very important (the North American-U.K. model). Markets for short-term funds are, in either case, of particular interest to central banks, given the fact that their policy actions are transmitted through such markets into the rest of the financial sector and into the non-financial sector.

déterminer l'intensité des pressions de la demande et des pressions inflationnistes et, par conséquent, à indiquer si une réorientation de la politique monétaire s'impose. Toutefois, comme dans le cas de l'évolution des prix, il importera de faire certaines distinctions. En effet, il faudra distinguer entre, d'une part, les effets de la demande sur la balance des paiements et le taux de change et, d'autre part, l'incidence des facteurs structurels.

Le taux d'augmentation du niveau général des revenus nominaux (appelé communément taux de salaire nominal) constitue manifestement un indicateur très utile pour le contrôle de l'inflation. L'attrait de cette mesure ne tient pas tant à la sensibilité des revenus nominaux aux pressions de la demande qu'au fait que ces derniers peuvent exercer des pressions sur les coûts et les prix dans un contexte institutionnel particulier. Cette dernière particularité pourrait exiger l'instauration de mesures restrictives qui viendraient s'ajouter au resserrement des conditions monétaires, non pas comme caractéristique permanente de l'économie de marché mais comme étape transitoire durant les premières phases du processus de stabilisation. De cette manière, le taux de salaire nominal pourrait servir temporairement de point d'ancrage pour les valeurs nominales, de concert avec les autres guides existants liés plus directement au processus d'expansion monétaire. À cet égard, l'expérience polonaise jusqu'à ce jour pourrait servir de modèle. Dans ce pays, le niveau des salaires (selon une politique des revenus fondée sur la taxation) sert, semble-t-il, à ancrer les valeurs nominales, aidé en cela dans une certaine mesure par des parités fixes.

### **L'édification des bases de l'économie de marché**

De toute évidence, beaucoup d'aménagements institutionnels devront avoir lieu (et cela va au-delà des questions touchant à la structure et aux pouvoirs des banques centrales, dont on a sans doute parlé plus tôt ce matin) avant que les pays concernés puissent mettre en oeuvre, comme c'est le cas ailleurs, une politique monétaire fondée sur les lois du marché.

Il ne fait aucun doute que pour ces pays l'une des principales priorités consistera, au départ, à mettre en place un système de dépôt et de crédit commercial axé sur le marché, champ d'activité traditionnel des banques commerciales. Mais, d'une manière plus générale, les autorités nationales devront aussi favoriser un accroissement de la concurrence sur les marchés financiers, afin que l'épargne soit canalisée vers les emplois les plus productifs. Au sein de l'OCDE, tant les systèmes où les banques jouent un rôle prépondérant (le modèle retenu en Europe continentale) que ceux où les titres négociables occupent une place très importante (le modèle appliqué en Amérique du Nord et au Royaume-Uni) ont permis de répondre à cet objectif. Dans un cas comme

Sometimes appropriate market structures have developed only after central banks and governments have taken the lead. For example, the Bank of Canada realized quite early in its existence that a well-functioning money market – dealing in treasury bills, commercial paper, overnight funds and the like – would assist the implementation of monetary policy as well as the overall efficiency of the economy. But although the banking system as such had been well developed for many decades, an active money market emerged only after a series of Bank of Canada initiatives in 1953-54. (These are documented in the Appendix.)

From the viewpoint of monetary control, and therefore inflation control, the development of the Canadian money market had two particularly desirable features.

In the first place, the Canadian money market's development provided an avenue for increased reliance on price-related methods of monetary management – broadly speaking, open market operations. And in this process, reliance on jawboning and on bank liquidity ratios to influence commercial banks' extension of credit became less and less – to the point that these features now have no role in Canada.

Secondly, the broadening of outlets for the placement of government debt – to include the money market as well as the bond market – helped to provide a first line of assurance that government deficit financing would not impinge upon monetary control. In general, in the absence of broad and resilient financial markets through which to absorb financing demands, the central bank would find it very difficult to deflect direct pressure from government deficits on its balance sheet and therefore on inflation of the monetary base.

To deflect the pressure by, for example, imposing higher bank reserve requirements in cash, or in government securities, is not an adequate solution. At the very least it causes problems for the efficiency and competitiveness of the deposit-taking part of the financial system. A better solution would be for the government to pay an interest rate sufficiently high that it attracts willing lenders, and without pumping up the money supply. In general, if credit of various kinds really has to be subsidized or channelled preferentially, the subsidy should be out in the open and not financed through what is in effect a tax (and therefore fiscal, not

dans l'autre, les marchés de capitaux à court terme présentent un intérêt particulier pour les banques centrales, car c'est par ces marchés que les mesures prises par celles-ci se répercutent sur le reste du secteur financier et du secteur non financier.

Pour que des structures appropriées de marché se développent, il a parfois fallu que les banques centrales et les gouvernements donnent le ton. La Banque du Canada, par exemple, n'existait pas depuis bien longtemps lorsqu'elle s'est rendu compte qu'un marché monétaire fonctionnant bien – un marché où se négocient des bons du Trésor, du papier commercial, des prêts à un jour, etc. – favoriserait la mise en oeuvre de la politique monétaire de même que la bonne tenue générale de l'économie. Mais ce n'est qu'à la suite d'une série d'initiatives prises par la Banque du Canada en 1953 et en 1954 qu'un marché monétaire actif est né au Canada, alors qu'un système bancaire bien établi existait déjà depuis plusieurs dizaines d'années. (Les initiatives de la Banque à ce chapitre sont décrites en annexe.)

Sur le plan du contrôle de la monnaie, et par conséquent du contrôle de l'inflation, la création du marché monétaire canadien présentait deux aspects particulièrement séduisants.

En premier lieu, la mise en place du marché monétaire a permis une utilisation accrue des méthodes de gestion monétaire axées sur les prix, c'est-à-dire, en gros, les opérations d'open market. Parallèlement, le recours à la persuasion et aux coefficients de liquidité des banques pour influencer le volume du crédit commercial a baissé au point que ces méthodes ne sont plus utilisées à l'heure actuelle au Canada.

En deuxième lieu, l'ouverture de nouveaux débouchés pour le placement des titres de la dette publique – les titres du marché monétaire venant s'ajouter aux titres obligataires – a fait en sorte dans une certaine mesure que le financement des déficits budgétaires ne nuise pas au contrôle de la monnaie. En règle générale, en l'absence de marchés financiers importants et solides, capables d'absorber les demandes de financement, une banque centrale aurait beaucoup de difficulté à faire dévier les pressions directes exercées par les déficits budgétaires sur son bilan et par conséquent sur l'expansion de la base monétaire.

Faire dévier la pression, en relevant par exemple les coefficients des réserves bancaires détenues sous forme d'espèces ou de titres d'État, ne constitue pas une solution adéquate. Au mieux, cela entrave l'efficacité et la compétitivité des institutions de dépôt au sein du système financier. Une meilleure solution serait que l'État paie un taux d'intérêt suffisamment élevé pour attirer les bailleurs de fonds sans pour autant gonfler la masse monétaire. En général, si le crédit sous

monetary, policy) on the intermediation of savings through the banking system.

A related issue with implications for controlling inflation is the importance of developing at an early stage a workable system of prudential oversight for financial institutions, including determining which institutions will have access to the lender-of-last-resort facility for liquidity purposes. This, too, is a separate topic of discussion in a later session. Its importance for inflation control is to remove a potential constraint on the conduct of monetary policy. The presence of distressed institutions may inhibit monetary discipline, for fear of precipitating a crisis in the financial system or of disrupting the flow of investment finance to the non-financial sector.

### The immediate challenges

Building institutions and building confidence takes time, and meanwhile monetary policy has to do what it can with what is available, keeping its eye fixed firmly on inflation control.

It cannot be emphasized too strongly that central to any prospect of overall monetary control is the absence of pressure on the central bank to inflate its balance sheet (simply put, to print money) because of budget deficit financing needs. Depending of course on each country's circumstances, some fiscal reining in, even fiscal reform, is therefore probably implied. This does not necessarily mean that deficit financing would not be available at all from the central bank. But such financing would have to be budgeted for in the framework of an overall monetary financing plan that reflected the needs of monetary control and not whatever size the deficit happened to be.

There may be a large monetary "overhang" – a form of forced savings – as a legacy from the previous system of passive credit creation and price control. The consequence may be an extreme burst of spending and inflation when prices are decontrolled. This carries the threat of derailing the process of building monetary confidence before it even gets started.

Here, the challenge clearly is to eliminate this burden as quickly as possible. One way of absorbing the overhang is the privatization of existing government assets. This is a delicate problem, given the natural concerns about selling at (possibly) fire

diverses formes doit vraiment être subventionné ou canalisé de préférence vers certains secteurs, la subvention devrait être clairement connue et non financée par ce qui est en fait une taxe (il ne s'agit plus alors de politique monétaire, mais bien de politique fiscale) sur l'intermédiation de l'épargne par le système bancaire.

Une autre question connexe ayant une incidence sur le contrôle de l'inflation concerne l'importance qu'il y a à mettre sur pied dès le début un système adéquat de surveillance prudentielle des institutions financières et à déterminer quelles institutions auront accès aux crédits de dernier recours aux fins de liquidité. Voilà un autre sujet de discussion qui sera abordé à une séance ultérieure. Si cette question est importante pour le contrôle de l'inflation, c'est qu'elle affranchit la conduite de la politique monétaire d'une contrainte éventuelle. La présence d'institutions en difficulté peut nuire à la discipline monétaire, de crainte qu'il n'en résulte une crise dans le système financier ou que les flux de capitaux vers le secteur non financier ne soient perturbés.

### Les défis immédiats

La création d'institutions et l'instauration d'un climat de confiance exigent du temps, et, dans l'intervalle, la politique monétaire doit faire ce qu'elle peut avec les moyens dont elle dispose tout en ne perdant pas de vue un seul instant le contrôle de l'inflation.

On n'insistera jamais assez sur le fait que le contrôle global de la monnaie n'est envisageable que dans la mesure où aucune pression n'est exercée sur la banque centrale afin qu'elle gonfle son bilan (autrement dit, qu'elle fasse marcher la planche à billets) pour financer un déficit budgétaire. Cela implique probablement, compte tenu bien sûr de la situation de chaque pays, une certaine compression des dépenses, et même une réforme fiscale. Il ne s'ensuit pas nécessairement que la banque centrale ne contribuerait aucunement au financement du déficit. Mais ce financement devrait s'inscrire dans le cadre d'un plan de financement monétaire global qui reflète les impératifs du contrôle de la masse monétaire et ne s'ajuste pas automatiquement à l'ampleur du déficit.

Un important excédent de monnaie – une forme d'épargne forcée – peut avoir été hérité du système précédent, où la création du crédit et le contrôle des prix ne jouaient aucun rôle. Il peut en résulter une montée en flèche de la dépense et de l'inflation après le déblocage des prix, et le processus visant à instaurer un climat de confiance à l'égard de la monnaie risque de faire long feu.

Le défi à relever ici est manifestement d'éliminer ce fardeau aussitôt que possible. Une façon d'absorber l'excédent de monnaie est la privatisation d'actifs appartenant à ces derniers. Il s'agit là d'un problème délicat, étant donné les

sale prices, especially to foreigners. Nevertheless, asset sales will be a useful safety valve. The housing stock in particular is a prime candidate for privatization, and one that in the hands of individuals would greatly increase their stake in the market economy. At the same time the disposition of state assets, for which the true market value of many is far from clear, will raise important prudential questions. If such sales are made on credit to domestic residents or firms it is critical that this not lead to an extension of the safety net of lender of last resort to insolvent financial or non-financial firms. It is also possible that an upward price *level* shift (for example through an increase in the relative price of food to stimulate production) could absorb some or all of any overhang of real balances. Currency reform, to eliminate excess balances, clearly has a place on the list of potential measures, but if it does not give every appearance of being definitive and final it will surely have serious after-effects on confidence in the monetary system. Therefore, currency reform looks more like a constituent measure of a broader stabilization package, most likely in the context of associated deficit-reducing fiscal measures to remove a systemic cause of inflation, rather than a self-contained step.

Another crucial challenge will be to ensure that “real” interest rates on both loans and deposits are positive. This will help to ensure a proper incentive for voluntary savings, and that there is room to differentiate credits on the basis of risk. It will also help to diminish any monetary overhang to the extent that real yields on these overhang balances were formerly negative.

\* \* \* \* \*

In a period when rapid structural, and therefore relative price, changes are occurring, and barring a fixed exchange rate solution that can be seen as definitive, the monetary authorities will have even greater difficulties than usual in determining what rate of monetary expansion is consistent with inflation control. Control over the central bank's assets (the ultimate lever of monetary policy) would likely need to be closely managed – so as to limit the pace of central bank credit expansion to one consistent with the authorities' best estimates of the flow of resources accruing to

préoccupations bien naturelles que soulève la vente d'actifs à des prix (peut-être) dérisoires, particulièrement à des étrangers. Néanmoins, la vente d'actifs constitue une soupape de sûreté utile. Le parc de logements, notamment, est tout désigné pour la privatisation, et l'acquisition de logements par des particuliers contribuerait grandement à accroître l'intérêt de ceux-ci à l'égard de l'économie de marché. Parallèlement, la vente d'actifs de l'État, dont la valeur de marché réelle est loin d'être évidente dans bien des cas, soulève d'importantes questions d'ordre prudentiel. Si ces ventes sont faites à crédit aux résidents ou aux entreprises du pays, il est essentiel qu'elles n'entraînent pas une extension, au profit d'entreprises financières ou non financières insolubles, du filet de sûreté que constituent les crédits de dernier recours. Il est également possible qu'une hausse du *niveau* des prix (par exemple, en raison d'un accroissement des prix relatifs des aliments ayant pour objectif de stimuler la production) puisse absorber une partie ou même la totalité des encaisses réelles excédentaires. Une réforme monétaire visant à éliminer les encaisses excédentaires peut certainement être envisagée, mais, si elle n'a pas toutes les apparences d'une mesure définitive, elle minera sûrement la confiance dans le système monétaire. C'est pourquoi une réforme monétaire ne doit pas être considérée comme une étape en soi, mais plutôt comme une partie intégrante d'un programme de stabilisation plus vaste, autant que possible complété par des mesures budgétaires de réduction du déficit en vue d'éliminer l'une des causes systémiques de l'inflation.

Un autre défi important sera de faire en sorte que les taux d'intérêt « réels » servis sur les prêts et sur les dépôts soient positifs. Des taux d'intérêt positifs contribueront à encourager l'épargne volontaire et permettront une différenciation des crédits en fonction du risque. Cela favorisera aussi la réduction de toute offre excédentaire de monnaie, dans la mesure où les rendements réels de ces encaisses excédentaires étaient auparavant négatifs.

\* \* \* \* \*

Dans une période où les changements structurels, et, par conséquent, les modifications des prix relatifs, se succèdent à un rythme rapide, et, exception faite de l'adoption d'un régime de taux de change fixes qui puisse être perçu comme définitif, les autorités monétaires éprouveront des difficultés encore plus grandes que d'ordinaire à déterminer un taux d'expansion monétaire qui soit compatible avec le contrôle de l'inflation. Le contrôle exercé sur les actifs de la banque centrale (levier ultime de la politique monétaire) devra probablement être très serré, afin que le rythme de l'expansion du crédit de la banque centrale

the central bank through the growth of the liability side of its balance sheet (e.g., from bank notes issued, increases in commercial banks' reserves) in a non-inflationary environment. There will be distinct merit in conservative estimates because confidence, once lost, is not easily regained. Such a "domestic credit expansion" approach has the virtue of safety first, being both a potentially useful brake on excessive monetary expansion and protective of the overall balance of payments.<sup>1</sup>

<sup>1</sup> See for example Manuel Guitian, "Credit Versus Money as an Instrument of Control," *IMF Staff Papers* 20 (November 1973): 785-800.

soit compatible avec les meilleures prévisions de cette dernière concernant l'augmentation que ses ressources pourraient enregistrer en contrepartie du gonflement de ses engagements (provenant notamment de l'émission de billets de banque et de l'accroissement des réserves des banques commerciales) dans un contexte non inflationniste. Les prévisions devront être empreintes de prudence, car une fois que la confiance est perdue, il n'est pas facile de la restaurer. Cette approche axée sur « l'expansion du crédit intérieur » a l'avantage d'être sûre puisqu'elle peut servir de frein à une expansion monétaire excessive et contribuer à protéger l'équilibre de la balance des paiements globale<sup>1</sup>.

<sup>1</sup> Voir par exemple « *Credit Versus Money as an Instrument of Control* » de Manuel Guitian, *Staff Papers* du FMI, novembre 1973, volume 20, pp. 785-800.

## APPENDIX:

### Establishing the Canadian money market

Before 1953 there was no organized short-term money market in Canada. Business had few options other than the chartered banks for short-term financing or money placement, at sticky interest rates set by the banks. "Call loans" of the banks to money market dealers were then quite illiquid and priced on the basis of the prime loan rate. Treasury bills and commercial paper were typically held to maturity. The banking system relied heavily on New York for short-term liquidity adjustments.

The lack of flexibility and competition in the domestic market for short-term funds was clearly detrimental to the efficient provision of financial services and the allocation of savings. Moreover, from its establishment in the mid-1930s, the Bank of Canada had been aware that its operations were hampered by the lack of a money market. In the absence of active markets for bills and overnight funds, the banks would allow their excess cash reserves to fluctuate over a fairly wide range. This meant that the central bank did not have reliable leverage over short-term monetary conditions, even though it could set the supply of cash

## ANNEXE :

### La création du marché monétaire canadien

Avant 1953, il n'existait pas de marché monétaire organisé au Canada. Les entreprises avaient peu de choix autres que le recours aux banques à charte pour se financer à court terme ou placer des fonds à des taux d'intérêt rigides fixés par ces dernières. Les « prêts à vue » accordés par les banques aux opérateurs du marché monétaire étaient très peu liquides à l'époque et les taux d'intérêt auxquels ils étaient consentis étaient fixés en fonction du taux de base des prêts bancaires. Les bons du Trésor et le papier commercial étaient généralement conservés jusqu'à l'échéance. Dans une large mesure, les banques se tournaient vers New York pour s'approvisionner en capitaux à court terme.

Le manque de souplesse et de concurrence sur le marché intérieur des capitaux à court terme nuisait manifestement à l'efficacité des services financiers offerts et à la répartition de l'épargne. Qui plus est, depuis sa création au milieu des années 30, la Banque du Canada s'était rendu compte que l'absence d'un marché monétaire entravait son propre fonctionnement. Sans un marché actif de bons et de capitaux à un jour, les banques laissaient leurs réserves excédentaires fluctuer dans des limites assez larges. Ainsi, la banque centrale ne disposait pas de moyen d'action fiable pour influencer les conditions monétaires à court terme, même si elle pouvait fixer avec une certaine précision l'offre de liquidités dans le système bancaire (par le truchement des opérations

to the banking system with some precision (through open-market operations).<sup>2</sup> The banks tended to react sluggishly to reserve tightening or easing. The Bank thought that the establishment of an active money market would induce the banks to manage their cash more finely and so provide a more effective channel for the transmission of monetary policy. However, any plans that the Bank may have wished to pursue in this respect had to be put off because of World War II and its economic aftermath.

By the early 1950s conditions in Canada were in principle favourable for the formation of a money market: official controls imposed during the war had been dismantled, and the central bank no longer attempted to hold down market interest rates; savings and investment had expanded strongly; the banks, trust companies and insurance companies formed a core of large and sophisticated intermediaries; and since bond and equity markets were thriving, there were plenty of securities firms with the resources to be money market dealers. Yet the overt encouragement of such a development by the Bank of Canada met with little success until various concrete initiatives were taken:

- 1953 • The Bank of Canada offered a line for short-term financing – Purchase and Resale Agreements (PRA) – to a group of 13 investment dealers, known as “jobbers.” Under this facility, inventories of treasury bills and short-term Government of Canada bonds could be temporarily financed at the central bank. Each jobber was given a specific limit on its access to PRA; the total value of the available lines was initially about as large as the eligible inventory held by the jobber group.
- Auctions of treasury bills were changed from a fortnightly to a weekly cycle, and amounts auctioned were increased.
  - Since the charge for PRA was substantially less than the prime rate, the jobbers quickly switched to central bank financing for most of their needs, going to the limit of their PRA lines. The Bank urged the chartered banks to

d’open market)<sup>2</sup>. Les banques avaient tendance à réagir avec lenteur au resserrement ou au desserrement du volume des réserves mises à leur disposition. La Banque du Canada croyait que la création d’un marché monétaire actif inciterait les banques à mieux gérer leurs encaisses et constituerait ainsi une courroie de transmission plus efficace pour la politique monétaire. Toutefois, la Banque a dû mettre en veilleuse tous les projets qu’elle souhaitait réaliser dans ce domaine en raison de la Deuxième Guerre mondiale et de ses répercussions sur l’économie.

Au début des années 50, la conjoncture au Canada était en principe propice à la création d’un marché monétaire : les contrôles officiels mis en place durant la guerre avaient été abolis, et la banque centrale ne tentait plus de maintenir à la baisse les taux d’intérêt du marché; l’épargne et l’investissement s’étaient fortement accrus; les banques, les sociétés de fiducie et les compagnies d’assurance formaient un noyau d’intermédiaires importants et sophistiqués; et, comme les marchés des obligations et des actions étaient florissants, il y avait une foule de maisons de courtage en valeurs qui disposaient des ressources nécessaires pour devenir des agents agréés du marché monétaire. Pourtant, la Banque du Canada a connu peu de succès dans ses efforts visant à encourager une telle évolution, jusqu’au moment où diverses initiatives concrètes furent prises :

- 1953 • La Banque du Canada met à la disposition d’un groupe de 13 courtiers en valeurs mobilières, appelés « agents agréés du marché monétaire », des facilités de crédit à court terme, les prises en pension d’effets. Grâce à ce mécanisme, les stocks de bons du Trésor et d’obligations à court terme du gouvernement canadien peuvent être financés temporairement à la banque centrale. Chaque agent agréé peut recourir aux prises en pension jusqu’à concurrence d’un plafond préétabli; initialement, la valeur totale des facilités de crédit disponibles était à peu près égale aux stocks de titres admissibles détenus par le groupe des agents agréés.
- La fréquence des adjudications de bons du Trésor est doublée, celles-ci devenant hebdomadaires, et les montants adjugés sont accrus.
  - Comme le taux d’intérêt auquel sont effectuées les prises en pension est nettement inférieur au taux de base des prêts bancaires, les agents agréés se mettent rapidement à faire appel à ce mécanisme pour

<sup>2</sup> “Cash” in this context refers to the deposit claims of banks on the Bank of Canada. These claims serve as reserves, for which there have been legal minimum requirements in Canada as elsewhere, and as settlement balances in the payments system.

<sup>2</sup> Dans ce contexte, « liquidités » désigne les dépôts des banques à la Banque du Canada. Ces dépôts servent de réserves (dont le montant ne doit pas être inférieur, au Canada comme ailleurs, à un niveau minimum) et de soldes de règlement dans le système de paiement.

provide day loans to the dealers at rates in line with money market yields, but the banks initially showed no interest in such an innovation.

- 1954 • The Bank Act revision introduced reserve averaging. Since statutory cash requirements would now apply to average reserve positions over a calendar month, the banks could make sizable economies on excess cash. This led to a more stable demand for bank reserves, and to prompt system responses to changes in policy settings.
- It was decided that credits to chartered bank reserve accounts for Bank of Canada security purchases would be subject to a settlement delay of at least two days. In contrast, settlement at the Bank for the proceeds of day loans that chartered banks had called from investment dealers would be booked next day. This difference in the speed of settlement greatly enhanced the relative position of day loans for liquidity adjustments by the banking system.
  - The chartered banks now agreed to provide day loans, at rates near those on treasury bills, up to the limit of unused PRA lines. This allowed the central bank to confine itself once again to last resort lending.
  - The banks also agreed to reduce charges for intra-day ("daylight") overdrafts of the investment dealers.<sup>3</sup>
  - The Bank provided wire facilities across the country for the transfer of government securities.

These measures achieved their objectives. By 1958 an active money market provided the channel for the transmission of monetary policy that the Bank had sought. In 1962 the central bank allowed bankers' acceptances to be eligible for PRA to assist their introduction in Canada, phasing out this support later when bankers' acceptances became well established. By this point the money market was going ahead under its own steam; and the

satisfaire la plupart de leurs besoins de financement et utilisent au maximum leurs facilités de crédit. La Banque presse les banques à charte de mettre à la disposition des agents agréés des prêts au jour le jour, à des taux comparables aux rendements des titres du marché monétaire, mais les banques ne manifestent dans un premier temps aucun intérêt pour une telle innovation.

- 1954 • La révision de la *Loi sur les banques* prévoit l'adoption d'une méthode de détermination des réserves fondée sur le calcul de moyennes. Comme les coefficients s'appliquent maintenant à la moyenne des réserves détenues pendant le mois, les banques peuvent réduire sensiblement le niveau de leurs liquidités excédentaires. En conséquence, la demande de liquidités auprès de la banque centrale se stabilise et les banques réagissent plus rapidement aux changements d'orientation de la politique monétaire.
- Il est décidé que les comptes de réserve des banques à charte seront crédités avec au moins deux jours de retard lorsque celles-ci vendent des titres à la Banque du Canada. Par contre, la Banque verse dès le jour suivant aux comptes des banques à charte le produit du remboursement des prêts au jour le jour que celles-ci ont accordés aux courtiers en valeurs mobilières. Cette différence dans le traitement des opérations de règlement favorise grandement le recours aux prêts au jour le jour aux fins d'ajustement du niveau des réserves-encaisse des banques.
  - Les banques à charte acceptent dorénavant d'octroyer des prêts au jour le jour, à des taux comparables à ceux des bons du Trésor, à hauteur des facilités de crédit non utilisées. Cela permet à la banque centrale de s'en tenir de nouveau à son rôle de prêteur de dernier recours.
  - Les banques acceptent également de réduire les commissions relatives aux découverts d'une journée mis à la disposition des courtiers en valeurs mobilières<sup>4</sup>.
  - La Banque crée à l'échelle nationale un service de transfert télégraphique des titres du gouvernement canadien.

Ces mesures ont donné les résultats souhaités. En 1958, un marché monétaire actif servait de courroie de transmission de la politique monétaire,

<sup>3</sup> The fee of a bank for a daylight overdraft is called "over-certification." Such overdrafts are necessary to dealers in securities because of technical lags in delivery and settlement.

<sup>4</sup> Les frais qu'exige une banque pour un découvert d'une journée sont appelés commissions sur découverts momentanés. Les courtiers ne peuvent éviter de tels découverts à cause de l'absence de simultanéité entre les opérations de livraison et de règlement.

rapid expansion of recent decades has been propelled by profit opportunities, competition and new technology rather than by policy measures. Indeed, the contribution of the authorities in the latter period has been more to liberate market forces than to undertake new measures of support.

This experience would suggest that the central bank can make a useful contribution to structural change in the financial sector. In the right environment, such as Canada's money market in the 1950s, a few key policy actions can propel rapid modernization. In turn, a well-functioning money market has proved of great value in improving the competitive efficiency of the financial market and in the implementation and transmission of monetary policy.

conformément aux désirs de la Banque. En 1962, cette dernière permettait que les acceptations bancaires soient admissibles à la prise en pension afin de favoriser leur introduction au Canada; cette pratique a été graduellement éliminée par la suite une fois les acceptations bancaires bien établies. À cette époque, le marché monétaire volait de ses propres ailes; l'expansion rapide enregistrée au cours des dernières décennies a été favorisée par les perspectives de profit, la concurrence et l'apparition de nouvelles techniques, plutôt que par des mesures de politique. De fait, durant la récente période, les autorités ont davantage cherché à libérer les forces du marché qu'à mettre en oeuvre de nouvelles mesures de soutien.

L'expérience vécue au Canada fait ressortir que la banque centrale peut apporter une contribution utile à l'évolution structurelle du secteur financier. Dans un cadre favorable, comme celui du marché monétaire canadien des années 50, quelques initiatives clés des pouvoirs publics peuvent favoriser une modernisation rapide. En retour, le développement d'un marché monétaire bien rodé a grandement contribué à accroître l'efficacité du marché financier et à faciliter la mise en oeuvre de la politique monétaire et la transmission de ses effets.

*le 13 septembre 1990*

It is a pleasure to be with you this morning. In the insurance field you have to take an appropriately long view, making sure that in interpreting and managing shorter-term developments you keep the fundamentals clearly in sight. So should monetary policy if it is to do its job properly.

Your chairman's suggestion was that I talk about current monetary policy, and I am delighted to give an update on how we at the Bank of Canada see the present situation.

However, to understand current monetary policy it is crucial to distinguish between the principles behind monetary policy and the economic environment in which that policy operates. Too often the actions that the Bank takes in financial markets are viewed as a change in the basic thrust of monetary policy, when in fact they only reflect a change in the economic and financial environment within the framework of an underlying monetary policy which is unchanged. In these remarks I shall focus on both the principle underlying monetary policy and recent changes in the economic environment.

The principle that underpins monetary policy – providing Canadians with a money that can be trusted, one that can be

Je suis heureux d'être parmi vous ce matin. Vous qui oeuvrez dans le domaine de l'assurance devez, comme il se doit, considérer les choses dans une perspective à long terme, en veillant toutefois à interpréter et à gérer l'évolution de la situation à court terme sans jamais perdre de vue les principes de base. C'est également de cette façon que devraient procéder les responsables de la politique monétaire s'ils veulent que cette dernière joue pleinement son rôle.

Votre président m'a suggéré de vous entretenir de la politique monétaire actuelle, et je suis ravi de l'occasion qui m'est ainsi offerte de faire le point sur la façon dont nous voyons la situation présente à la Banque du Canada.

Toutefois, pour comprendre la politique monétaire de l'heure, il importe avant tout de faire une distinction entre, d'une part, les principes sur lesquels se fonde la politique monétaire et, d'autre part, la conjoncture économique dans laquelle cette politique est mise en oeuvre. Il arrive trop souvent que les opérations de la Banque du Canada sur les marchés financiers soient interprétées comme des signes d'une modification de l'orientation fondamentale de la politique monétaire, alors qu'en fait elles ne reflètent qu'une adaptation à l'évolution du cadre économique et financier dans lequel s'inscrit la poursuite d'objectifs monétaires qui eux ne changent pas. Dans mes observations, je m'efforcerai donc de traiter à la fois des principes qui déterminent la politique monétaire et des récents changements qui ont marqué la conjoncture économique.

counted on to retain its value – remains a permanent fixture, and in that sense is not “current.” This principle is the foundation of monetary policy because it is the essential contribution that monetary policy can make to sustained economic progress. What monetary policy contributes will not be everything that can be done through public policy for sustained economic progress. But what monetary policy can bring to the table is monetary, that is price, stability.

In recent years, developments in the Canadian economy have in fact pushed us further away from price stability. It has been crucial that we reverse this trend. The Bank has never suggested that we should aim to reach price stability virtually immediately, without any regard for short-run consequences. What we are seeking are gradual but progressive reductions in inflation that will ensure there is no doubt about the commitment of monetary policy to contribute price stability to Canada’s economic well-being.

One striking example of how the economic and financial environment in which monetary policy is conducted can change is what has been happening to the world price of oil recently, together with its impact in all kinds of markets, including bond and foreign exchange markets. A more fundamental change in the environment is the shift in the forces of supply and demand at work in the Canadian economy. Whereas for quite some time the Canadian economy overall was operating in strained market conditions with a pronounced inflationary bias, there are now signs that those inflationary forces, at least from the side of demand, have begun to give some ground.

These kinds of developments do not call into question the strategic objective of price stability on which monetary policy must rest, but they do change the economic and financial climate in which this goal is pursued. And such shifts in the climate affect the kinds of actions the Bank takes in financial markets that have an influence on short-term interest rates.

The need to distinguish between the principles behind monetary policy and the environment in which that policy operates is highlighted by much of the recent public commentary on monetary policy. This commentary sees the policy as a “high interest rate” policy, but it is a profoundly incorrect view. As the

Le principe sur lequel repose la politique monétaire – à savoir donner aux Canadiens une monnaie en laquelle ils peuvent avoir confiance, une monnaie dont la valeur est stable – est immuable et n’a donc pas un caractère « actuel ». Et ce principe est le fondement de la politique monétaire, parce qu’il traduit l’apport essentiel de cette politique à la croissance soutenue de notre économie. Bien sûr, la politique monétaire n’est pas la seule politique des pouvoirs publics qui puisse favoriser une telle croissance, mais la contribution qu’elle peut apporter, c’est la stabilité monétaire, autrement dit, la stabilité des prix.

Au cours des dernières années, les courants qui ont influé sur l’économie canadienne nous ont en fait éloignés de la stabilité des prix. Il était impérieux d’inverser cette tendance. À la Banque du Canada, nous n’avons jamais laissé entendre qu’il fallait réaliser presque immédiatement la stabilité des prix, sans tenir compte des conséquences à court terme de nos actions. Nous voulons plutôt faire baisser le taux d’inflation peu à peu, mais de façon soutenue, de sorte que ne subsiste aucun doute quant à la fermeté avec laquelle la politique monétaire vise à réaliser la stabilité des prix pour le bien-être économique des Canadiens.

Les événements qui, récemment, ont influé sur le cours mondial du pétrole et dont les effets se sont répercutés sur tous les marchés, y compris les marchés des obligations et des changes, constituent un exemple frappant de l’évolution constante du cadre économique et financier dans lequel la politique monétaire est mise en oeuvre. Mais le jeu incessant des forces de l’offre et de la demande au sein de l’économie canadienne se traduit par des changements plus déterminants encore. Si, dans l’ensemble, l’économie canadienne faisait face depuis un bon moment à des conditions tendues et fortement inflationnistes sur les marchés, on observe maintenant des signes que les pressions inflationnistes, du moins en ce qui a trait à la demande, ont commencé à s’émousser.

Les changements de cet ordre de la conjoncture économique ne remettent pas en question l’objectif stratégique de stabilité des prix sur lequel repose la politique monétaire, mais ils modifient certainement le climat économique et financier dans lequel est poursuivi cet objectif. À leur tour, ces modifications agissent sur la nature des opérations que peut mener la Banque du Canada sur les marchés financiers pour influencer les taux d’intérêt à court terme.

J’ai tenu à faire cette distinction entre les principes qui sous-tendent la politique monétaire et la conjoncture où cette politique est mise en oeuvre, notamment à cause des commentaires qui ont émané du public ces derniers temps. On prétend que nous appliquons une politique de « taux d’intérêt élevés », mais cela provient d’une perception profondément erronée de la situation. Comme la Banque du Canada l’a signalé à maintes reprises, le moyen

Bank has noted on many occasions, the surest way to build high interest rates into the economy would be through policies that nourished inflation.

Why, then, is the Bank of Canada so often seen as having a high interest rate policy? The problem seems to be one of perspective.

Let me expand on this by underlining two reasons particularly relevant to monetary policy why interest rates in Canada have risen in recent years. First, in an economic climate of inflationary demand, such as Canada has evidently been experiencing, a monetary policy that does not print additional money at an inflationary pace will for a while put upward pressure on short-term interest rates. This is part of the mechanism by which anti-inflationary resistance from the Bank of Canada is transmitted to the economy, and this, presumably, is what the commentary focusses on. However, there is another, more deep-seated reason for upward pressure on interest rates. To the extent that a higher rate of inflation takes hold, confidence in the value of money is undermined and people demand a higher return – an inflation premium in the rate of interest – for saving money and lending it. The experiences of other countries with inflation – the more inflationary the policies over time, the higher the interest rates that prevail – readily confirm this point.

What the Bank of Canada's monetary policy is designed to provide is a climate where the inflation premium can narrow as inflation pressures and expectations are subdued. We would like to see this happening progressively, and not just for short-term rates but across the whole range of interest rates. At the same time, as the pressures on inflation in our economy recede, this eases the demands for money and credit and provides room for policy actions to ease conditions in financial markets.

With that review of the fundamentals of monetary policy and the effect of changing economic and financial developments on monetary policy actions, I want to turn to the current situation and then to some of the challenges that lie ahead for the Canadian economy.

Short-term market interest rates in Canada have come down by slightly more than one percentage point from their peaks this spring. But I trust that what I have just said about interest rates

le plus sûr d'avoir des taux d'intérêt continuellement élevés au pays serait de pratiquer des politiques qui alimentent l'inflation.

Comment se fait-il alors que la politique de la Banque du Canada soit si souvent taxée de politique de « taux d'intérêt élevés »? Il s'agit, il me semble, d'une question de perspective.

Permettez-moi de préciser ma pensée en insistant sur deux raisons particulièrement pertinentes, du point de vue de la politique monétaire, pour lesquelles les taux d'intérêt ont augmenté au Canada ces dernières années. En premier lieu, dans un climat économique marqué par une demande de nature inflationniste, comme c'est clairement le cas au Canada depuis quelque temps, une politique monétaire qui n'a pas pour objet de faire fonctionner la planche à billets à un rythme inflationniste exerce temporairement une pression à la hausse sur les taux d'intérêt à court terme. C'est là un rouage du mécanisme au moyen duquel la résistance que la Banque du Canada oppose à la progression de l'inflation est transmise à l'économie et c'est, semble-t-il, la cible de la plupart des commentaires. Cependant, il y a une autre raison, beaucoup plus profonde, au fait que les taux d'intérêt sont soumis à des pressions à la hausse. Dans la mesure où un taux d'inflation élevé arrive à s'incruster dans l'économie, la confiance dans la valeur de la monnaie commence à s'effriter et les gens exigent une rémunération plus élevée – une sorte de prime pour l'inflation incorporée au taux d'intérêt – de leurs dépôts d'épargne ou de leurs prêts. L'expérience d'autres pays – où, comme on a pu le constater, plus les politiques adoptées ont été inflationnistes, plus les taux d'intérêt sont demeurés élevés – confirme clairement ce point.

La politique monétaire canadienne est formulée de façon à créer les conditions propices à la diminution de la prime d'inflation au fur et à mesure que les attentes et les pressions inflationnistes s'estompent. Nous aimerions voir ce processus se dérouler de façon progressive et s'appliquer non seulement aux taux d'intérêt à court terme, mais également à l'ensemble des autres taux pratiqués sur les marchés. Par ailleurs, une atténuation des pressions inflationnistes dans notre économie entraînera un ralentissement de la demande de monnaie et de crédit, ce qui fournira la marge de manoeuvre nécessaire à l'adoption de mesures favorisant un assouplissement des conditions sur les marchés financiers.

Maintenant que nous avons examiné les principes fondamentaux de la politique monétaire et les effets de l'évolution économique et financière sur les mesures de politique monétaire, j'aimerais traiter de la situation actuelle et aborder certains des grands défis qui se profilent à l'horizon pour l'économie canadienne.

does help to explain why it is inadequate to describe the underlying path of monetary policy simply through interest rates. The lesson of experience is that there is no single sure guide for monetary policy actions, and the Bank of Canada relies on a wide range of indicators of economic and financial developments in making its decisions. However, the thrust of monetary policy over an extended period of time is probably best seen in terms of its influence over the pace of monetary expansion in the economy. To lend concreteness to this key idea, we calculate, publish and analyze various measures of money and credit on a very regular basis.

Although the Bank has undertaken considerable research on the monetary and credit aggregates, we have not found the behaviour of any one of them sufficiently reliable to shoulder the burden of acting as a formal target for monetary policy. Nonetheless, encouraging a moderate expansion of money and credit in the economy, as opposed to a pace of expansion that is very rapid, does provide some reasonable assurance that monetary policy is on the right track. By "the right track" I mean one conducive to a pace of advance in total dollar spending in the Canadian economy that is consistent with a return to price stability. This is a basic principle that those responsible for monetary policy cannot afford to ignore, and its validity has once again been borne out in Canada's recent experience.

Thus, in the three years 1987 through 1989, the monetary aggregates were expanding exceptionally rapidly. Over that period, the more narrowly based aggregate, M1 – which has for quite a few years been shrinking as a share of money-like claims – rose on average by 6 per cent a year. The more broadly defined aggregates, M2 and M2+, which include the currency and demand deposits in M1 as well as personal savings and non-personal notice deposits and which have had a relatively stable relationship with total spending in the economy, went up on average at a double-digit pace. Credit also expanded very rapidly. Credit to businesses went up steadily by 10 per cent a year, while lending to households went up still faster, by 16 per cent a year.

Numbers like these taken together, and when sustained over such an extended time period, offer persuasive evidence from a monetary perspective of the buildup of inflation pressure. They were, of course, not the only evidence on this threat to the

Les taux d'intérêt à court terme du marché au Canada sont inférieurs d'un peu plus de 1 point de pourcentage aux sommets qu'ils avaient atteints au printemps. Mais j'espère que ce que je viens de dire à propos des taux d'intérêt vous éclaire sur les raisons pour lesquelles on ne peut analyser l'orientation fondamentale de la politique monétaire seulement à partir de l'évolution des taux d'intérêt. L'expérience a démontré qu'il n'existe pas de guide sûr et unique sur lequel appuyer les mesures de politique monétaire, aussi la Banque a-t-elle recouru à une vaste gamme d'indicateurs de l'évolution économique et financière au moment de prendre ses décisions. Toutefois, il semble que l'orientation de la politique monétaire sur longue période doive de préférence être interprétée en fonction de son influence sur le rythme d'expansion monétaire. C'est dans cet esprit que nous établissons, publions et analysons très régulièrement diverses mesures de la monnaie et du crédit.

Malgré les recherches considérables que nous avons menées à la Banque du Canada sur les agrégats monétaires et les agrégats du crédit, nous n'avons pu en trouver un seul dont le comportement soit assez fiable pour servir de cible officielle de la politique monétaire. Néanmoins, en favorisant une expansion modérée de la monnaie et du crédit au sein de l'économie plutôt qu'une expansion très rapide, nous sommes raisonnablement assurés d'être sur la bonne voie, c'est-à-dire sur une voie qui mène à un rythme de progression de la dépense nominale globale propice à un retour à la stabilité des prix. Il s'agit d'un principe de base que les responsables de la politique monétaire doivent prendre en considération et dont la justesse a été une fois de plus corroborée par l'expérience canadienne récente.

Ainsi, pendant trois ans, soit de 1987 à 1989, les agrégats monétaires ont connu une progression exceptionnellement rapide. Au cours de cette période, l'agrégat au sens étroit M1, dont la croissance en proportion de l'ensemble de la monnaie et de la quasi-monnaie diminuait depuis un certain nombre d'années, a enregistré un rythme d'expansion moyen de 6 % par année. Les agrégats au sens plus large, M2 et M2+, qui englobent la monnaie hors banques et les dépôts à vue qui composent M1 ainsi que les dépôts d'épargne des particuliers et les dépôts à préavis autres que ceux des particuliers, et qui affichent une relation assez stable avec la dépense globale, ont enregistré un taux de croissance moyen supérieur à 10 %. L'expansion du crédit a aussi été très rapide. Le crédit aux entreprises s'est accru régulièrement de 10 % par année, et le crédit aux ménages a progressé plus vite encore, soit à un rythme de 16 % par année.

Des chiffres de cet ordre pris ensemble, surtout lorsqu'ils se maintiennent durant une longue période, sont des signes convaincants, d'un point de vue monétaire, d'une accumulation des pressions inflationnistes. Évidemment, ce n'était pas là les seuls indices dont disposait la Banque du Canada pour déduire

economy that the Bank of Canada had available. But they provided important signals that the Bank bore very much in mind in its monetary policy actions. We wanted to see a less inflationary pace of monetary expansion, and that is why we progressively tightened the rein on the supply of central bank liquidity to the financial system.

Since the beginning of 1990 the growth of the monetary aggregates has slowed, thereby permitting some easing of the rein on central bank liquidity and of conditions in money markets. Has monetary growth slowed too much? In some recent months the aggregates were declining. Credit is also growing much slower than before. However, it is important not to leap to strong conclusions – in particular that monetary policy is way off track – on the basis of monetary aggregate data over a relatively short time period.

In this regard, two points are worth bearing in mind. The first is that the recent slowdown in the aggregates needs to be viewed in the context of the earlier strong and very prolonged surge. For example, in August of this year, M2 was more than 20 per cent higher than two years earlier and about 10 per cent higher than a year ago. The second is that the recent slowing in M1 and M2 is greater than can be explained by the performance of the economy – in particular the growth of total national income and the level of interest rates – even with the rebound in these aggregates in August. There is a good deal of short-term volatility in the aggregates, and it is important to look at averages over longer periods of time.

However, if weakness in the monetary aggregates were to persist, for reasons that seemed to be reasonably well grounded in the behaviour of the economy, the need for a better sustained expansion in the aggregates would clearly be a major consideration propelling Bank of Canada actions towards further easing in money markets.

Considerable attention has recently been focussed on the Canadian dollar, so let me now turn to the question of where the exchange rate fits into our policy thinking.

The exchange rate is an important price in the Canadian economy, with effects on demand, inflation and incentives to export, as well as on the value of investments in Canada. Therefore, it is very understandable for headlines to be generated

que la menace inflationniste planait sur l'économie. Mais ils constituaient des signaux importants dont la Banque a grandement tenu compte dans la mise en oeuvre de sa politique monétaire. Nous voulions que la masse monétaire croisse à un rythme moins inflationniste, c'est pourquoi nous avons resserré progressivement les liquidités que la banque centrale met à la disposition du système financier.

La croissance des agrégats monétaires s'est ralentie depuis le début de 1990, permettant ainsi à la banque centrale de relâcher quelque peu le contrôle qu'elle exerce sur l'offre de liquidités et d'assouplir légèrement les conditions régnant sur les marchés monétaires. Ce ralentissement a-t-il été trop marqué? Au cours des derniers mois, ces agrégats ont même par moments enregistré une baisse. Le crédit progresse aussi plus lentement qu'auparavant. Toutefois, il importe de ne pas sauter à des conclusions hâtives – notamment celle que la politique monétaire fait complètement fausse route – à la lumière de données sur l'évolution des agrégats monétaires au cours d'une période relativement courte.

À cet égard, il convient de garder deux points à l'esprit. Le premier est que le ralentissement récent de la croissance des agrégats doit être analysé en tenant compte de l'accélération vive et très prolongée que ces mesures avaient enregistrée auparavant. Par exemple, en août de cette année, M2 restait supérieur de plus de 20 % au niveau qu'il affichait deux ans plus tôt et d'environ 10 % à celui de l'année dernière. Le deuxième point à considérer est que le ralentissement récent du rythme de progression de M1 et de M2 est plus prononcé que ne peut l'expliquer la tenue de l'économie – en particulier la croissance du revenu national global et le niveau des taux d'intérêt – même si l'on tient compte de la poussée de ces agrégats en août. Les agrégats sont très instables à court terme, aussi est-il important de considérer des moyennes sur des périodes plus longues.

Toutefois, si la faible croissance des agrégats monétaires devait persister, à cause de facteurs apparemment bien ancrés dans le comportement de l'économie, la nécessité d'une expansion plus soutenue de ces agrégats serait clairement une des considérations majeures qui inciteraient la Banque du Canada à assouplir davantage les conditions monétaires.

Le dollar canadien a beaucoup retenu l'attention dernièrement, aussi aimerais-je maintenant parler de la place qu'occupe le taux de change dans la formulation de nos politiques.

Le taux de change est un prix important dans l'économie canadienne : il influe sur la demande, l'inflation et les incitations à exporter de même que sur la valeur des investissements au Canada. Il est donc très compréhensible que les variations du taux de change fassent les manchettes. Le cours de notre monnaie subit certes des influences nombreuses et variées, mais il est également sensible,

by movements in the exchange value of the Canadian dollar. And while the exchange rate is affected by many different forces, it is certainly also affected, even if imprecisely, by Bank of Canada actions in money markets. Indeed, insofar as movements in the exchange rate can be attributed to short-term interest rates, they are one channel through which monetary policy will have effects on the economy.

But this does not mean that the exchange rate should be a target of monetary policy – a particular number to be sought as a basic goal of monetary actions. The issues surrounding exchange rate targeting are in fact both complicated and far-reaching. The Bank has discussed various aspects of these questions on a number of recent occasions, and the only point I will make here is that the basic reason for not having the exchange rate as a target of monetary policy is that only under some very particular assumptions is such a target consistent with domestic monetary stability. However, we pay a good deal of attention to the Canadian dollar in terms of its effect on overall demand conditions in Canada, alongside interest rates and other influences on demand, and the Bank reacts accordingly. Let me emphasize as well that we are also keen to see to it that the exchange market itself does not become a source of domestic financial and economic instability.

As regards recent exchange rate developments, let me make two observations that illustrate the complexity of exchange rate considerations. First, the recent movement of the Canadian dollar has evidently resulted in part from world oil price developments. This aspect of exchange rate change, relating to an independent economic shock, is not really a monetary policy phenomenon. Second, interpretation of exchange rate change also has to bear in mind that while the Canadian dollar has fluctuated against the U.S. dollar, the U.S. dollar has also fluctuated against overseas currencies. Thus, looking at the Canadian-U.S. dollar relationship in isolation is only seeing part of the picture.

Let me now turn more directly to economic developments.

For some time the Canadian economy was operating at levels of activity well above the actual capacity of the economy to produce on any sustained basis. As a result there were mounting

bien que de façon imprécise, aux initiatives prises par la Banque du Canada sur les marchés monétaires. De fait, dans la mesure où les variations du taux de change peuvent être attribuables aux taux d'intérêt à court terme, elles constituent un canal par lequel la politique monétaire fera sentir ses effets sur l'économie.

Mais cela ne veut pas dire que la politique monétaire doit viser un taux de change donné, c'est-à-dire un chiffre précis à titre de cible fondamentale de mesures de politique monétaire. Les questions concernant l'utilisation du taux de change comme cible de la politique monétaire sont à la fois compliquées et d'une portée considérable. La Banque a abordé divers aspects de ces questions à plusieurs reprises ces derniers temps; tout ce que j'en dirai aujourd'hui, c'est que la raison fondamentale pour laquelle le taux de change ne sert pas de cible de la politique monétaire est qu'une telle cible n'est compatible avec la stabilité des prix au pays que dans des conditions très particulières. Toutefois, nous accordons beaucoup d'attention à l'incidence du dollar canadien sur les conditions de la demande globale au Canada, ainsi qu'aux taux d'intérêt et aux autres facteurs qui influent sur la demande, et les mesures que nous prenons tiennent compte de tout cela. Je tiens également à souligner que nous veillons aussi à ce que le marché des changes ne devienne pas lui-même une source d'instabilité financière et économique au pays.

En ce qui concerne l'évolution récente du taux de change, j'aimerais faire deux observations qui illustrent bien la complexité des considérations entourant cette question. En premier lieu, les mouvements qu'a connus le dollar canadien ces derniers temps ont manifestement été provoqués, en partie du moins, par la hausse des cours mondiaux du pétrole. Les variations du taux de change qui sont ainsi attribuables à un choc économique indépendant ne sont pas vraiment du ressort de la politique monétaire. En deuxième lieu, lorsqu'on veut interpréter les variations du taux de change, on ne doit pas perdre de vue le fait que, si le dollar canadien a fluctué par rapport au dollar américain, ce dernier a aussi fluctué par rapport aux monnaies d'outre-mer. Par conséquent, on ne peut avoir une vue d'ensemble de la situation si l'on ne considère que la relation entre le dollar canadien et le dollar américain.

J'aimerais maintenant traiter plus directement de l'évolution économique.

Pendant un certain temps, l'économie canadienne a connu une activité qui dépassait de loin le rythme de production qu'elle pouvait effectivement soutenir. Cela a donné lieu à une intensification des pressions inflationnistes, et l'inflation s'est inscrite en hausse. En raison de la persistance de ces pressions, l'inflation a pris un élan qui ne s'est inversé qu'après une longue période. Les craintes

pressures on inflation, and the trend of inflation was upward. Because the pressures persisted for so long, a momentum developed in the inflation process that has been slow to reverse. Concerns about continuing inflation have accumulated, and businesses and individuals have been seeking to protect their incomes from future erosion by inflation.

Monetary policy has sought to resist and reverse these inflation pressures, and in recent months evidence has been accumulating that the situation is changing considerably. Demand in the economy has eased from the unsustainably high levels of last year. As the demand pressures on inflation have become less intense, there has been scope for easier monetary conditions. This is evident in the reduction in short-term interest rates that has taken place. Longer-term interest rates have also declined in recent months as confidence has grown.

Progress is being made. After a long delay, the economy is adjusting to a balance of demand and supply that can provide a solid basis for sustained non-inflationary growth. If businesses and individuals now begin to base their economic decisions on the prospect of easing inflation, the path ahead should go more smoothly.

Still, there will be some potentially difficult passages to navigate. For example, the recent surge in oil prices can complicate progress of the Canadian economy towards a non-inflationary environment. While the overall balance of inflationary and disinflationary forces to which monetary policy needs to pay attention depends on far more than what happens to the price of any one commodity – even such an important commodity as oil – a rise in the price of oil that persists has important consequences that cannot be avoided for real incomes in Canada and among our main trading partners. As well, the proposed Goods and Services Tax is due to come into effect at the beginning of 1991.

While the initial direct effects of the GST on the price level (estimated to be about 1 1/4 per cent) plus any oil price effects will lead to a jump in the consumer price index in the period ahead, it will be important for us to look through those effects and ensure that we continue to make progress in bringing down the underlying rate of inflation. In particular, monetary policy

qu'elle perdure se sont multipliées, de sorte que les entreprises et les particuliers ont cherché à protéger leurs revenus contre l'érosion future de leurs avoirs provoquée par l'inflation.

La politique monétaire a cherché à s'opposer à ces pressions et à les inverser, et les indices d'un changement considérable de la situation économique ont été observés ces derniers mois. La demande a fléchi par rapport aux niveaux insoutenables de l'année dernière. Ce relâchement des pressions de la demande de nature inflationniste a permis un assouplissement des conditions monétaires, lequel transparaît dans la réduction des taux d'intérêt à court terme qui s'est amorcée. Les taux d'intérêt à long terme ont aussi reculé ces derniers mois à la faveur du regain de confiance.

Des progrès sont en voie de réalisation. L'économie parvient enfin, après une longue période, à un équilibre entre la demande et l'offre qui peut fournir une base solide pour une croissance non inflationniste durable. Si les entreprises et les particuliers se mettent maintenant à fonder leurs décisions économiques sur la perspective d'une atténuation de l'inflation, cela facilitera certainement la transition.

Il n'en demeure pas moins que nous rencontrerons quelques difficultés sur notre chemin. Ainsi, la montée récente des prix du pétrole pourrait bien ralentir les progrès de l'économie canadienne dans la voie de la création d'un climat non inflationniste. Bien que l'équilibre d'ensemble des forces inflationnistes et désinflationnistes auquel la politique monétaire se doit d'être attentive soit très loin d'être uniquement fonction de la variation du cours d'un produit de base donné (même s'il s'agit d'un produit de base aussi important que le pétrole), un renchérissement soutenu du pétrole a inévitablement une forte incidence sur les revenus réels au Canada et chez nos principaux partenaires commerciaux. Par ailleurs, la taxe sur les produits et services doit entrer en vigueur au début de 1991.

Les premiers effets directs de la TPS sur le niveau des prix (qui, selon les estimations, augmentera d'environ 1 1/4 %), en plus de ceux du renchérissement du pétrole, entraîneront dans l'avenir une forte hausse de l'indice des prix à la consommation, mais nous devons analyser ces chocs et veiller à ce qu'ils ne nous empêchent pas de continuer à enregistrer des progrès dans la voie de la réduction du taux tendanciel d'inflation. En particulier, la politique monétaire doit contrer le risque que le bond attendu des prix à la consommation ne déclenche une surenchère inflationniste des revenus et des prix.

Il s'agit là d'une véritable gageure, comme ne le démontre que trop clairement l'expérience des années passées, pendant lesquelles nous avons été

must guard against the risk that the expected jump in consumer prices will trigger an inflationary round of compensating increases in incomes and prices.

Keeping to such a course will be a challenge, as the experience of recent years with the buildup of inflation pressures all too clearly indicates. It will require an adjustment to less inflationary rates of increase in domestic spending and less rapid expansion in money and credit than we have managed in the last few years.

As I noted earlier, our monetary aggregates are not sufficiently reliable for us to use them as formal intermediate targets; however, they are valuable indicators in a period such as this. Continued progress on inflation will imply, for example, rates of expansion of the broad monetary aggregates, M2 and M2+, that are down from the 10 to 15 per cent growth rates of recent years. Indeed, making allowance for the tendency of such broader aggregates to grow rapidly in relation to the economy, we would expect annual rates of increase that are consistently below 10 per cent, and ultimately going down to well below 10 per cent. Confidence in an improved inflation performance should permit us to achieve this outcome with interest rates that are lower than at present.

By way of conclusion I would like to make four observations to summarize these remarks.

- Monetary policy must, because of its very nature, be dedicated to fighting inflation and promoting price stability. This process takes time, but it is the vital contribution, or anchor, that monetary policy can provide to confidence and economic growth for an economy based on money and monetary exchange.
- The intensity of inflation pressures will, however, vary over time, largely because of fluctuations in demand relative to the capacity available in the economy. Around the basic trend provided by a monetary policy framework consistently aimed at promoting price stability, changing demand conditions will be reflected in movements of short-term interest rates. When inflation pressures are intensifying, as they were earlier in Canada, short-term interest rates will rise. When the pressures

aux prises avec une aggravation des pressions inflationnistes. Nous devons nous adapter à des rythmes de la dépense intérieure et de l'expansion de la monnaie et du crédit moins inflationnistes que ceux que nous avons connus ces dernières années.

Comme je le faisais remarquer plus tôt, nos agrégats monétaires ne sont pas assez fiables pour nous servir de cibles intermédiaires officielles, mais ils n'en demeurent pas moins des indicateurs précieux à un moment comme celui-ci. Il faudra par exemple, pour réaliser des progrès constants sur le front de l'inflation, ramener la croissance des agrégats monétaires au sens large M2 et M2+ en deçà des taux de 10 à 15 % observés depuis quelques années. De fait, tout en tenant compte de la forte tendance de ces agrégats à croître rapidement par rapport à l'économie, nous nous attendrions néanmoins à ce que les taux annuels d'expansion se maintiennent constamment au-dessous de la barre des 10 %, pour s'établir ultérieurement bien en deçà de ce chiffre. La conviction que des progrès seront réalisés sur le front de l'inflation devrait nous permettre d'atteindre cet objectif ainsi que des taux d'intérêt moins élevés qu'ils ne le sont à l'heure actuelle.

En terminant, j'aimerais vous faire, en guise de résumé, quatre dernières remarques.

- La politique monétaire doit, en raison de sa nature même, être totalement vouée à la lutte contre l'inflation et à la promotion de la stabilité des prix. Il faut du temps pour y parvenir, mais c'est la contribution essentielle – le point d'ancrage – que la politique monétaire peut apporter au soutien de la confiance et de la croissance dans une économie fondée sur la monnaie et les échanges monétaires.
- Cependant, l'acuité des pressions inflationnistes variera au fil du temps, et ce, largement à cause des fluctuations de la demande par rapport aux capacités de l'économie. Les conditions changeantes de la demande, compte tenu de la tendance fondamentale créée par une politique monétaire constamment axée sur la recherche de la stabilité des prix, se traduiront par des fluctuations des taux d'intérêt à court terme. Lorsque les pressions inflationnistes s'intensifient, comme cela a été le cas il y a peu de temps au Canada, les taux d'intérêt à court terme augmentent. En revanche, une atténuation des pressions entraîne dans son sillage une baisse de ces taux.
- Mais, pour maintenir les taux d'intérêt à un bas niveau, la politique monétaire doit inciter les Canadiens à fonder leurs actions sur la perspective d'une baisse plutôt que d'une hausse de l'inflation. C'est là la seule politique

- on inflation begin to ease, this provides room for lower rates.
- But in order to maintain low interest rates, monetary policy must encourage Canadians to base their actions on declining rather than on rising inflation. Such a policy is the only way to build confidence that the dollars Canadians save will retain their value. People who have confidence that the value of their savings will not be dissipated by inflation will save without requiring high rates of interest.
  - Finally, it needs to be stressed that these lasting benefits from monetary confidence flow through to the economy as a whole.

qui puisse donner aux Canadiens l'assurance que la valeur de leurs économies ne se détériorera pas. S'ils sont convaincus que cette valeur ne sera pas minée par l'inflation, les épargnants n'exigeront pas des taux d'intérêt élevés en guise de protection.

- Enfin, il faut souligner que les avantages durables que procure la confiance à l'égard de la monnaie se répercutent dans l'ensemble de l'économie.

## Symbols used in charts and tables

A arithmetic scale  
 L logarithmic scale  
 E estimated  
 P preliminary  
 R revised  
 N not available  
 C corrected

Owing to the rounding of figures, components may not always add to the totals shown. A horizontal rule in the body of the table indicates either a break in the series or that the earlier figures are available only at a more aggregated level.

## Abréviations utilisées dans les graphiques et les tableaux

A Échelle arithmétique  
 L Ordonnées logarithmiques  
 E Estimations  
 P Chiffres provisoires  
 R Chiffres révisés  
 N Chiffres non disponibles  
 C Chiffres corrigés

Du fait que les chiffres sont arrondis, l'addition des éléments d'un tableau ne correspond pas toujours exactement au total indiqué. Une ligne horizontale dans le corps d'un tableau indique soit qu'il y a une rupture dans une série, soit que les données des périodes antérieures n'existent que sous une forme plus agrégée.

\*Due to changes in accounting procedures, data for April 1986 and subsequent months are not strictly comparable with those for earlier periods. In particular, unemployment insurance contributions before April 1986 are included in Specified Purpose Accounts.

†Fiscal year totals are from the audited Public Accounts of Canada, while monthly data are from the unaudited "Statement of Financial Operations" published in the Canada Gazette. The sum of the monthly data for a fiscal year is likely to differ from the annual totals taken from the Public Accounts.

\*A cause des modifications apportées aux méthodes comptables, les chiffres d'avril 1986 et des mois suivants ne sont pas tout à fait comparables à ceux des périodes précédentes. Il est à noter que les cotisations versées à l'assurance-chômage avant avril 1986 figurent sous la rubrique des Comptes à fins déterminées.

†Les données de l'exercice financier sont tirées des comptes publics du Canada, tandis que les données mensuelles sont tirées de l'État des opérations financières, qui est publié dans la Gazette du Canada, sans la sanction du Vérificateur général. Il est fort probable que les sommes des données mensuelles d'un même exercice diffèrent des chiffres annuels tirés des comptes publics.

\*Users of these measures of capacity utilization are advised to refer to the discussion of them in the May 1980 issue of this Review "Measuring Capacity Utilization: A Technical Note". Particular attention should be paid to the discussion of how the data are to be evaluated and interpreted.

Les utilisateurs des mesures des taux d'utilisation des capacités sont invités à se référer à l'article qui a été publié dans ce numéro de la Revue de mai 1980, sous le titre "Mesurer l'utilisation des capacités: une note technique". Il est particulièrement important d'accorder une attention particulière à l'analyse de la façon dont il faut évaluer et interpréter ces données.

\*Starting in January 1987, data taken from the Survey of Employment, Payroll and Hours are not strictly comparable with those for earlier months because of improvements in sampling methodology. Adjustment factors to calculate growth rates across this statistical break are available from Statistics Canada.

\*Les données extraites de l'Enquête sur l'emploi, la rémunération et les heures de travail ne sont plus, depuis janvier 1987, tout à fait comparables à celles des mois précédents, en raison d'améliorations apportées à la méthode d'échantillonnage. Il est possible de se procurer, auprès de Statistique Canada, les facteurs de correction permettant d'obtenir des taux de croissance comparables pour les séries antérieures et postérieures à janvier 1987.

\*Starting in January 1987, data taken from the Survey of Employment, Payroll and Hours are not strictly comparable with those for earlier months because of improvements in sampling methodology. Adjustment factors to calculate growth rates across this statistical break are available from Statistics Canada.

\*Les données extraites de l'Enquête sur l'emploi, la rémunération et les heures de travail ne sont plus, depuis janvier 1987, tout à fait comparables à celles des mois précédents, en raison d'améliorations apportées à la méthode d'échantillonnage. Il est possible de se procurer, auprès de Statistique Canada, les facteurs de correction permettant d'obtenir des taux de croissance comparables pour les séries antérieures et postérieures à janvier 1987.

# Notes to the tables

# Notes relatives aux tableaux

## Cansim-Databank identification numbers

Many of the time series published in the Review are available from Statistics Canada in machine-readable form, for use on computers, or in print-outs. Each time series of annual, quarterly, monthly or weekly data on the Cansim system (Canadian Socio-Economic Information Management) has an identification number. A variety of prefixes identify the series maintained by Statistics Canada (e.g. D1432, P484000), while those maintained by the Bank of Canada have a B prefix (e.g. B318), and those maintained by Canada Mortgage and Housing Corporation have a H prefix (e.g. H48). The identification number is given as a reference at the top of each column of data and refers to the series of weekly, monthly or quarterly data in that column. Where the frequency of a series as it is available on Cansim is different from that shown in the table or where a combination of quarterly and monthly data is shown in the table, the frequency of the Cansim series is indicated by a superscript M if monthly or by a superscript Q if quarterly. Current and revised data are entered into Cansim immediately on release.

## Weekly series

The tables in the Review do not cover a full year of weekly data. For all Wednesday series, in the event a holiday falls on a Wednesday, data for the preceding business day will be shown. Figures for weekly series for which the Bank of Canada is the source are available on request to the Department of Monetary and Financial Analysis, Bank of Canada, Ottawa K1A 0G9.

## Notes to the tables

The reference notes to the statistical tables in the Review, which prior to 1981 were included in each monthly issue, are now printed under a separate cover. The separate section of notes will be updated and reprinted as necessary. Additional copies of the explanatory notes may be obtained by writing to the Bank of Canada Review, Public Information Division, Secretary's Department, Bank of Canada, Ottawa K1A 0G9. The latest note supplement is dated January 1989.

This section of the monthly Review will include only revisions to the notes as may be required to keep them current for users of the statistical tables, as well as the reference notes pertaining to tables that are published only occasionally in the Review.

## Cansim - Numéros de référence des séries de Databank

Nombre des séries chronologiques publiées dans la Revue peuvent être obtenues de Statistique Canada sous une forme directement exploitable par ordinateur ou sous la forme d'imprimés. Elles font partie intégrante du fichier Cansim<sup>1</sup>, dont chaque série chronologique - annuelle, trimestrielle, mensuelle ou hebdomadaire - est identifiée par un numéro de référence. Les numéros des séries élaborées par Statistique Canada sont précédés de diverses lettres (par exemple : D1432, P484000), ceux des séries de la Banque du Canada, de la lettre «B» (par exemple : B318) et ceux de la Société canadienne d'hypothèques et de logement, de la lettre «H» (par exemple : H48). Dans nos tableaux, le numéro apparaît en tête de la colonne et identifie la série hebdomadaire, mensuelle ou trimestrielle qui figure dans la colonne; lorsque les fréquences de données figurant au fichier Cansim et dans un tableau de la Revue diffèrent ou que le tableau comporte à la fois une série mensuelle et une série trimestrielle, la fréquence de la série Cansim est indiquée par la lettre «M» si la série est mensuelle et par la lettre «Q» si elle est trimestrielle.

<sup>1</sup> Ce sigle est une abréviation de *Canadian Socio-Economic Information Management System* - Système canadien de traitement des données socio-économiques

## Séries hebdomadaires

Dans les tableaux de la Revue, les séries de données hebdomadaires ne couvrent pas une année entière. Lorsque le mercredi est un jour férié, les statistiques du mercredi sont établies à partir des données du jour ouvrable précédent. On pourra obtenir les données provenant de la Banque du Canada en s'adressant au département des Études monétaires et financières, Banque du Canada, Ottawa K1A 0G9.

## Notes relatives aux tableaux

Les notes relatives aux tableaux de la Revue, qui jusqu'à la fin de 1981 étaient reproduites dans chaque livraison, sont désormais imprimées séparément. Elles seront mises à jour et publiées au besoin. Ceux qui désirent recevoir d'autres exemplaires des notes sont priés de s'adresser à la Revue de la Banque du Canada, Section de l'information, Secrétariat, Banque du Canada, Ottawa K1A 0G9. Le plus récent supplément a été produit en janvier 1989.

La présente section de la Revue ne contiendra que les mises à jour essentielles à l'interprétation des statistiques et les notes se rapportent aux tableaux publiés à des fréquences variables dans la Revue.

## A1

As a result of a rebasing of the national accounts, lines 10-15 on page 3 of the Notes should now read:

- 10 Gross domestic product at constant (1986) prices (Table H3)
- 11 Gross domestic product by industry; at constant 1986 prices (Table H5)
- 12 Industrial production; at constant 1986 prices (Table H13)
- 13 Manufacturing production; at constant 1986 prices (Table H5)
- 14 Gross national expenditure implicit price index; 1986=100 (Table H4)
- 15 Consumer price index excluding food; 1986=100 (Table H11)

## D1-D2

Sources: Bank of Canada, Statistics Canada

Data on Table D1 are derived from total trust and mortgage loan company data collected quarterly by Statistics Canada (available in "Financial Institutions," Catalogue No. 61-006) and from a monthly survey by the Bank of Canada of companies that, at the end of September 1989, represented over 80 per cent of total assets in these industries. For months between quarter-ends, financial items on Table D1 are estimated individually from this survey to obtain aggregate data for the industry. As a result, for these months, total assets may not equal total liabilities, as they are the sums of the component series. Where there are foreign currency assets or liabilities these are included in the relevant component series. Data for the mortgage subsidiaries of the chartered banks appearing on Table D2 originate directly from the monthly survey by the Bank of Canada. On 25 January 1988 the Laurentian Group, which included Eaton-Bay Financial Services, restructured its assets and liabilities among three companies: Laurentian Bank, Laurentian Trust and Laurentian Bank of Canada Mortgage Corporation. As a result, total assets and liabilities of trust and mortgage loan companies were reduced by \$207 million, representing the amount of assets and liabilities allocated to the Laurentian Bank from Eaton-Bay Trust.

- *Cash and gross demand and notice deposits* include deposits placed in chartered banks and other financial institutions in Canada and abroad. • *Items in transit* represent the net balance of all items in the course of settlement. • *Term deposits* include swapped deposits at chartered banks and deposits at institutions other than chartered banks. • *Other short-term paper and bankers' acceptances* include notes issued by sales finance companies and provincial and municipal treasury bills and short-term notes. • *Canadian bonds* are bonds, debentures and notes with an original term to maturity of one year or more. • *Personal loans* comprise both secured and unsecured loans. Beginning in December 1989, this series also includes loans to unincorporated businesses and non-profit organizations. • *Other loans* include secured loans placed with investment dealers as well as other collateral and unsecured loans; they also include farm loans.

- *Other assets* comprise other investments in Canada as well as investments in institutions and corporations outside Canada, investments in and claims on parent, subsidiary and affiliated companies, accounts receivable and accrued revenue, fixed assets, real estate and other assets, less accumulated provisions for losses on loans and investments.

- *Daily interest deposits* include only those deposits held by companies surveyed by the Bank of Canada. • *Personal deposits* include deposits by individuals, unincorporated businesses and non-profit institutions. • *Tax-exempt deposits* include RRSPs, RHSPs and other tax-sheltered funds placed in savings and term deposits. • *Promissory notes and debentures* include promissory notes, subordinated notes and debentures issued under trust indenture. • *Other liabilities* consist of debt owing to parent, subsidiary and affiliated companies, accounts payable and accrued liabilities, corporation income taxes payable, deferred income, mortgages payable, deferred income taxes and other liabilities.

## A1

L'année de base retenue dans les comptes nationaux ayant été modifiée, les lignes 10-15 de la page 3 des Notes aux tableaux devraient maintenant se lire comme suit :

- 10 Produit intérieur brut à prix constant (1986) (Tableau H3)
- 11 Produit intérieur brut par branche d'activité à prix constants (1986) (Tableau H5)
- 12 Production industrielle à prix constants (1986) (Tableau H13)
- 13 Production manufacturière à prix constants (1986) (Tableau H5)
- 14 Dépense nationale brute; indice synthétique des prix; 1986=100 (Tableau H4)
- 15 Prix à la consommation, alimentation exclue; 1986=100 (Tableau H11)

## D1 et D2

Source : Banque du Canada et Statistique Canada

Les données qui figurent au Tableau D1 sont tirées de l'ensemble des données des sociétés de fiducie ou de prêt hypothécaire, recueillies tous les trimestres par Statistique Canada (publiées dans *Institutions financières*, catalogue n° 61-006) et d'une enquête mensuelle menée par la Banque du Canada auprès d'un échantillon de sociétés de fiducie ou de prêt hypothécaire qui, à la fin de septembre 1989, détenaient plus de 80 % de l'actif de ce secteur. Pour ce qui est des mois qui ne coïncident pas avec une fin de trimestre, les chiffres des postes financiers figurant au Tableau D1 sont estimés au cas par cas à partir des données de l'enquête mensuelle pour obtenir les données globales du secteur. En conséquence, le total des actifs pour les mois en question peut ne pas être égal au total des éléments du passif correspondant, puisqu'il résulte de l'addition des chiffres de chacun des éléments de la série visée. Les avoirs et engagements en monnaies étrangères sont inclus le cas échéant dans chacune des séries correspondantes. Les données des filiales hypothécaires des banques à charte, qui figurent au Tableau D2, sont tirées directement de l'enquête mensuelle de la Banque du Canada. Le 25 janvier 1988, le groupe financier de la Laurentienne, qui comprenait les Services financiers Eaton-Baie, a réparti ses avoirs et engagements entre trois sociétés : la Banque Laurentienne du Canada, le Trust La Laurentienne du Canada Inc. et la Société d'hypothèque Banque Laurentienne du Canada. Par conséquent, les avoirs et les engagements totaux des sociétés de fiducie ou de prêt hypothécaire ont accusé une baisse de 207 millions de dollars, montant qui représentait la part des avoirs et engagements du Trust Eaton-Baie allouée à la Banque Laurentienne du Canada.

- *L'encaisse, les montants bruts des dépôts à vue et les dépôts à préavis* comprennent les dépôts confiés aux banques à charte et aux autres institutions financières au Canada et à l'étranger. • *Les effets en cours de compensation* représentent le solde net de tous les effets en cours de règlement.

- *Les dépôts à terme* comprennent les dépôts swaps dans les banques à charte et les dépôts dans les institutions autres que les banques à charte. • *Le poste autre papier à court terme et acceptations bancaires* comprend les billets émis par les sociétés de financement, les bons du Trésor émis par les provinces ou les municipalités et les billets à court terme. • *Obligations canadiennes*. Ce poste comprend les obligations, les débetures et les billets dont l'échéance est de un an ou plus. • *Les prêts aux particuliers* comprennent les prêts garantis ou non garantis. Depuis décembre 1989, cette série comprend également les prêts aux entreprises non constituées en sociétés et aux sociétés à but non lucratif. • *Les autres prêts* comprennent les prêts garantis accordés aux courtiers en valeurs mobilières de même que les autres prêts sur nantissement et les prêts non garantis; ils comprennent également les prêts agricoles. • *Les autres éléments de l'actif* comprennent les autres placements au Canada et les placements dans les institutions et les sociétés constituées à l'étranger, les placements dans les sociétés mères ou les créances sur celles-ci, les filiales et les sociétés affiliées, les comptes-clients, les produits constatés par régularisation, les immobilisations, les biens immobiliers et autres avoirs, moins le montant cumulé des provisions pour pertes sur prêts et sur placements.

- *Le poste dépôts à intérêt quotidien* ne comprend que les dépôts détenus par les sociétés comprises dans l'enquête de la Banque du Canada. • *Les dépôts des particuliers* comprennent les dépôts des particuliers, ceux des entreprises non constituées en sociétés et ceux des sociétés à but non lucratif. • *Les dépôts exempts d'impôts* comprennent les REER, les REEL et autres fonds non imposables placés sous forme de dépôts d'épargne et de dépôts à terme. • *La rubrique billets à ordre et débetures* comprend les billets à ordre, les billets subordonnés et les débetures émises en vertu d'un acte fiduciaire. • *Les autres éléments du passif* se composent des sommes dues aux sociétés mères, aux filiales et aux sociétés affiliées, les comptes-fournisseurs et les charges à payer, les impôts à payer sur le revenu des sociétés, les revenus différés, les emprunts hypothécaires, les impôts sur le revenu différés et les autres engagements.

## H5

Source: Statistics Canada

Data are obtained from the Statistics Canada monthly publication "Gross Domestic Product by Industry," Catalogue 15-001 and are generally compiled according to the 1980 Standard Industrial Classification. The industry groups—mines, quarries and oil wells, manufacturing, and other utilities—are the component parts of industrial production.

• The *business sector* includes all enterprises that operate for gain. • The *non-business sector* consists primarily of government services, educational services and hospitals and related health and social services.

## H11

Source: Statistics Canada

Data are obtained from the Statistics Canada publication "The Consumer Price Index," Catalogue 62-001. Beginning in January 1989 the weights used in constructing the index are based on 1986 consumer expenditure patterns, replacing the 1982 weights used from January 1985. Three earlier reweightings occurred, in April 1982 incorporating 1978 expenditure patterns, in October 1978 using 1974 weights and in May 1973 using 1967 weights. In July 1990, with the release of the June 1990 consumer price index, the time base was changed in a purely arithmetic operation from 1981 to 1986=100. Further information on these revisions, as well as on the concepts and methodology, may be obtained from Statistics Canada publications. Effective with the release of the January 1985 numbers Statistics Canada revised the definition of the shelter component to include both goods and services. A consistent historical series was provided back to September 1978.

The percentage changes shown in Column 15 of Table A1 are the rates published by Statistics Canada in Catalogue 62-001.

## H12

Sources: Statistics Canada, Labour Canada

• *Labour income, wages and salaries and profits per unit of output* have been calculated by the Bank of Canada from Statistics Canada data. Labour income per unit of output is obtained by dividing total labour income including military pay and allowances by GDP (in constant 1986 dollars). Non-farm commercial wages and salaries per unit of output are obtained by dividing total wages and salaries less wages and salaries in agriculture, fishing, trapping, public administration and non-commercial services by GDP for the commercial non-farm sector. Manufacturing wages and salaries per unit of output are obtained by dividing manufacturing wages and salaries by gross manufacturing output. Non-farm commercial profits per unit of output are obtained by dividing corporate profits incorporated as a component of GDP by GDP for the commercial non-farm sectors. Except for the last calculation, GDP for the non-farm and commercial non-farm sectors excludes fishing and trapping.

## H13

Sources: Statistics Canada, Labour Canada

• *Retail trade* figures refer to aggregate sales by retail outlets; direct sales to consumers that bypass the retail outlet are not included. In the table, sales of recreational and motor vehicle dealers have been subtracted from total retail sales.

## H5

Source : Statistique Canada

Ces données sont tirées de la publication mensuelle de Statistique Canada intitulée «Produit intérieur brut par industrie», n° de catalogue 15-001; elles sont généralement établies d'après la Classification type des industries de 1980. La production industrielle englobe les secteurs suivants : mines, carrières et puits de pétrole, fabrication et services d'utilité publique.

• Le *secteur des entreprises* comprend toutes les entreprises à but lucratif. • Le *secteur non commercial* comprend principalement les services publics, les établissements d'enseignement, les hôpitaux ainsi que les services de santé et les services sociaux connexes.

## H11

Source : Statistique Canada

Les données proviennent de la publication de Statistique Canada intitulée «L'indice des prix à la consommation» (n° 62-001 au catalogue). À compter de janvier 1989, les pondérations qui servent au calcul de l'indice sont fondées sur la structure des dépenses de 1986 et remplacent les pondérations de 1982, qui étaient utilisées depuis janvier 1982. Les pondérations avaient été révisées à trois reprises auparavant, soit en avril 1982 pour tenir compte de la structure des dépenses de 1978, en octobre 1978 pour tenir compte de la structure des dépenses de 1974 et en mai 1973 pour tenir compte de la structure des dépenses de 1967. En juillet 1990, après publication des données de l'indice des prix à la consommation pour juin 1990, l'ancienne année de base, soit 1981, a été remplacée par 1986; les opérations effectuées ont été purement arithmétiques. On trouvera dans les publications de Statistique Canada de plus amples renseignements sur ces révisions ainsi que sur les concepts et la méthodologie utilisés. La publication des données de janvier 1985 a coïncidé avec la révision par Statistique Canada de la définition du logement; la nouvelle définition de cette composante englobe à la fois des biens et des services. La série chronologique utilisant cette définition remonte à septembre 1978.

Les taux de variation reproduits à la colonne 15 du Tableau A1 sont extraits de la publication n° 62-001 de Statistique Canada.

## H12

Sources : Statistique Canada, Travail Canada

• Le *revenu du travail* et les *bénéfices par unité produite* ont été calculés par la Banque du Canada à partir des données de Statistique Canada. Pour calculer les gains des ouvriers par unité produite, on a divisé l'ensemble des gains des employés (solde et allocations des militaires comprises) par le PIB en dollars de 1986. Les salaires et traitements par unité produite dans les entreprises non agricoles sont calculés en divisant l'ensemble des salaires et traitements moins les salaires et traitements versés aux employés dans l'agriculture, la pêche, le piégeage, l'administration publique et les services non commerciaux par la production brute du secteur. Les salaires et traitements par unité produite des ouvriers dans les industries manufacturières sont calculés en divisant les salaires et les traitements payés dans ces industries par la production brute de celles-ci. Les bénéfices par unité produite des entreprises commerciales, agriculture exclue, sont calculés en divisant le montant global des bénéfices de ces entreprises, qui figure dans le PIB, par leur production brute. Exception faite du dernier calcul, la production brute du secteur non agricole et des entreprises commerciales non agricoles exclut la pêche et le piégeage.

## H13

Sources : Statistique Canada, Travail Canada

• Le *commerce de détail* comprend l'ensemble des ventes des détaillants; les ventes faites directement aux consommateurs sans l'entremise des détaillants sont exclues. Ont été soustraites de l'ensemble des ventes, les ventes de véhicules de tourisme et de véhicules automobiles effectuées par les concessionnaires.

## Automation Services Department

### Chief:

D. W. MacDonald

### Assistant Chief:

F. J. B. Turner; B. A. Nichols;  
C. J. Hemstead; J. J. Otterspoor;  
J. M. McEwan

### Automation Services Officer:

A. T. Finkelstein

### Senior Project Manager:

J. M. Gabie; L. R. McEwen;  
C. J. A. M. Saikaley

### Automation Services Manager:

B. V. Riff; M. C. M. Sabourin;  
C. H. Scott; H. A. Klee;  
M. C. A. Tong; D. W. Walker;  
G. A. Hopps; J. M. F. A. Lemieux;  
J. C. Weir

### Senior Project Leader:

J. A. D. Bourbonnais; J. G. Hare;  
S. S. Law; J. Lindsey;  
S. Tennenhouse; J. G. Burchell;  
J. E. M. Clérout; J. S. Garbuio;  
D. M. MacCara; S. M. Webber;  
D. R. Chandonnet; C. J. Buske;  
L. A. Di Millo

## Department of Premises Management

### Chief:

C. J. Stephenson

### Deputy Chief:

K. W. Kaine

### Building Consultant:

A. J. Connidis

### Assistant Chief:

D. G. Suggitt

### Assistant Chief, Building Services:

J. R. Lines

### Financial and Systems Adviser:

J. A. Nason

### Head, Protective Services Division:

J. H. Carroll

### Building Project Officer:

D. Czop

### Major Projects Officer:

R. L. Wall

### Manager, Building Services:

I. G. Price

### Manager, Materials Management:

R. D. Hepplewhite

### Building Manager, Ottawa:

J. R. G. Saumure

### Manager, Budget and Administration:

D. L. Whitman

## Comptroller's Department

### Comptroller and Chief Accountant:

J.-P. Aubry

### Deputy Comptroller:

F. J. Mahoney

### Assistant Comptroller:

J. W. Thomson; N. J. Pearson

### Financial Systems Officer:

R. M. J. O'Brien

### Payments Officer:

J. A. F. Payer

### Financial Analysis Officer:

G. T. Gaetz

### Accounting Officer:

W. D. Sinclair

### Budget Officer:

J. M. R. Dumas

### Senior Financial Analyst:

E. V. MacKinnon

## Audit Department

### Auditor:

J. Cosier

### Deputy Auditor:

P. W. Koppe

### Assistant Auditor:

G. R. Stockford; D. N. Sullivan

### Audit Officer:

H. F. McNeill

## Département de l'Automatisation

### Chef :

D. W. MacDonald

### Chefs adjoints :

F. J. B. Turner; B. A. Nichols;  
C. J. Hemstead; J. J. Otterspoor;  
J. M. McEwan

### Agent des services d'automatisation :

A. T. Finkelstein

### Chef de projets :

J. M. Gabie; L. R. McEwen;  
C. J. A. M. Saikaley

### Chefs de service :

B. V. Riff; M. C. M. Sabourin;  
C. H. Scott; H. A. Klee;  
M. C. A. Tong; D. W. Walker;  
G. A. Hopps; J. M. F. A. Lemieux;  
J. C. Weir

### Chefs principaux de projets :

J. A. D. Bourbonnais; J. G. Hare;  
S. S. Law; J. Lindsey;  
S. Tennenhouse; J. G. Burchell;  
J. E. M. Clérout; J. S. Garbuio;  
D. M. MacCara; S. M. Webber;  
D. R. Chandonnet; C. J. Buske;  
L. A. Di Millo

## Département de la Gestion des immeubles

### Chef :

C. J. Stephenson

### Sous-chef :

K. W. Kaine

### Expert-conseil en immeubles :

A. J. Connidis

Rapports techniques (voir la liste aux pages suivantes)

Working Papers

Documents de travail

*Technical Reports are published in the original language only, with an abstract in both official languages. Single copies of these publications may be obtained without charge by writing to: Public Information Division, Secretary's Department, Bank of Canada, Ottawa K1A 0G9. Consult the December 1982 issue of the Review for a list of the Staff Research Studies and Technical Reports published before 1980.*

#### Technical Reports

- 18 Simulation analysis of a model based on the life-cycle hypothesis (1980)  
Jean-Pierre Aubry and Diane Fleurent
- 19 The process of wage determination: A survey of some recent work (1979)  
Daryl L. Merrett
- 20 Some aspects of the Canadian experience with flexible exchange rates in the 1970s (1980)  
Charles Freedman and David Longworth
- 21 Two Canadian investment outlook surveys: An overview and a review (1980)  
Brian O'Reilly
- 22 Building a small macro-model for simulation: Some issues (1980)  
Paul R. Masson, David E. Rose and Jack G. Selody
- 23 The productivity-inflation nexus in Canada 1963-1979 (1981)  
J. Peter Jarrett and Jack G. Selody
- 24 Economic projections and econometric modelling: Recent developments at the Bank of Canada (1981)  
Heather Robertson and Michael McDougall
- 25 The equations of RDXF, September 1980 version (1982)  
Heather Robertson and Michael McDougall
- 26 The structure and dynamics of RDXF, September 1980 version (1982)  
Heather Robertson and Michael McDougall
- 27 Monetary aggregates as targets: Some theoretical aspects (1981)  
Charles Freedman
- 28 A comparison of alternative methods of monetary aggregation: Some preliminary evidence (1981)  
Jon P. Cockerline and John D. Murray
- 29 Investment: A survey of models with some implications for the effects of monetary policy (1981)  
Francis Scotland
- 30 The leading indicator properties of surveyed consumer attitudes and buying intentions (1982)  
Bruce Rayfuse
- 31 The economic significance of aspects of Canada's international payments (1982)  
Kevin Clinton and David Longworth
- 32 The saving-investment approach to the current account (1982)  
John T. Cuddington
- 33 An econometric model of the steel trade (1982)  
Richard Dion
- 34 Modelling government fiscal behaviour in Canada (1983)  
Jack G. Selody and Kevin G. Lynch
- 35 Asset stocks and the use of monetary and fiscal policies to reduce inflation (1983)  
Paul Masson

*Les rapports techniques sont publiés seulement dans la langue utilisée par les auteurs; ils sont cependant précédés d'un résumé bilingue. On peut obtenir gratuitement un exemplaire de ces publications en s'adressant à la Section de l'information, Secrétariat, Banque du Canada, Ottawa K1A 0G9. Pour obtenir la liste des travaux de recherche et des rapports techniques publiés avant 1980, veuillez consulter le numéro de décembre 1982 de la Revue.*

## Cover

### Belgium: 100 francs, 1948

Under a royal decree of 15 October 1948, Belgium replaced its coinage with a new, post-war series. The silver 100-franc coin shown on the cover was the largest denomination of the new issue. Dedicated to the Belgian monarchy, it depicts, from right to left, the conjoined heads of King Leopold I, Leopold II, Albert and Leopold III.

Belgium established a constitutional monarchy one year after the revolution of 1830 when the country gained independence from the Netherlands. Prince Leopold of Saxe-Coburg was elected King Leopold I. During the reign of Leopold I (1831-1865) and that of his son, Leopold II (1865-1909), Belgium expanded in Europe and established itself as a colonial power in central Africa. When Leopold II died in 1909 without an heir, the throne passed to his nephew Albert (1909-1934). During Albert's reign and that of his son, Leopold III (1934-1950), Belgium suffered the ravages of invasion and occupation through two world wars.

Although this coin commemorates the monarchy, it was issued at a time when the future of the monarchy was in question. The return of the exiled King Leopold was an object of much debate during the immediate post-war years and the issue was not resolved until 1950 when, with the approval of the government, Leopold was readmitted to the country.

Slightly smaller than a Canadian silver dollar, the coin forms part of the National Currency Collection, Bank of Canada. Photography by James Zagon, Ottawa.

## Couverture

### Belgique : Pièce de 100 francs, 1948

En vertu d'un décret royal daté du 15 octobre 1948, la Belgique remplaça l'ensemble de ses pièces de monnaie. La pièce d'argent de 100 francs, qui est reproduite en page couverture, constitue la coupure la plus élevée de la nouvelle émission. Frappée pour rendre hommage à la monarchie belge, cette pièce porte, de droite à gauche, les têtes conjuguées de Léopold I<sup>er</sup>, Léopold II, Albert et Léopold III.

La Belgique devint une monarchie constitutionnelle un an après la révolution de 1830, qui lui avait permis d'obtenir son indépendance des Pays-Bas. Le prince Léopold de Saxe-Cobourg fut élu roi des Belges, sous le nom de Léopold I<sup>er</sup>. Durant son règne (1831-1865) et celui de son fils, Léopold II (1865-1909), la Belgique agrandit son territoire en Europe et s'imposa comme puissance coloniale dans la région centrale de l'Afrique. Lorsque Léopold II décéda, en 1909, sans laisser d'héritier direct, le trône revint à Albert, son neveu. Durant le règne d'Albert I<sup>er</sup> (1909-1934) et celui de son fils, Léopold III (1934-1950), eurent lieu la Première puis la Seconde Guerre mondiale, au cours desquelles la Belgique fut envahie et occupée.

Bien que la pièce illustrée en page couverture rende hommage à la monarchie, elle fut émise au moment où l'avenir de celle-ci était remis en cause. En effet, durant les premières années d'après-guerre, la question du retour d'exil du roi Léopold III donna lieu à une grande controverse qui ne cessa qu'en 1950, lorsque le gouvernement consentit à ce que le roi rentre au pays.

Légèrement plus petite que le dollar canadien en argent, cette pièce de 100 francs belges fait partie de la Collection nationale de monnaies, Banque du Canada. Photographie : James Zagon, Ottawa.

# Developments in credit markets in the first half of 1990

## L'évolution du marché du crédit au premier semestre de 1990

- Total funds raised by non-financial borrowers reached \$51 billion in the first half of 1990, down sharply from about \$68 billion in the corresponding period the previous year. Although the demand for household credit has contracted somewhat, most of the reduction in credit raised – the largest since the first half of 1982 – reflects the decline in borrowing by non-financial businesses and the federal government.
- Funds raised by non-financial businesses declined in spite of stable investment spending and lower profits. However, this decline is consistent with lower takeover activity by Canadian corporations and a slowdown in the accumulation of financial assets relative to the first half of 1989. Businesses made greater use of short-term instruments such as commercial paper and bankers' acceptances, relying much less on business loans. Their issues of long-term securities also declined.
- As a result of higher taxes and lower financing requirements related to exchange transactions, the federal government reduced its borrowing by around \$7.2 billion from the first half of 1989. The increase in issues of marketable bonds and the decrease in redemptions of savings bonds allowed issues of treasury bills to decline sharply. Financing requirements of the provincial and municipal governments remained stable, with the increase in short-term credit offsetting the decline in bond issues.
- Despite some weakness in the real estate market, the demand for mortgage loans remained strong relative to the first half of 1989, reflecting primarily the continuing strength of housing starts. However, preliminary data for the third quarter indicate a marked slowdown in mortgage credit growth. Funds raised through consumer loans fell slightly. This decline is consistent with high interest rates and the heavy debt load relative to personal disposable income.
- The proportion of security issues in total financing declined to nearly the same level as funds obtained from Canadian financial institutions. Compared with the first half of 1989, a larger proportion of total financing was provided by securities sold abroad.
- Following a decline in syndicated loans from foreign banks, funds raised from non-residents fell to about half the level recorded in the first half of 1989.
- Les crédits obtenus par l'ensemble des emprunteurs non financiers se sont chiffrés à 51 milliards de dollars au premier semestre de 1990, en forte baisse par rapport à la période correspondante de l'année dernière, où ils s'étaient situés à près de 68 milliards de dollars. Bien que la demande de crédit émanant du secteur des ménages se soit légèrement contractée, la réduction du financement obtenu – la plus importante depuis le premier semestre de 1982 – est attribuable essentiellement au fléchissement des emprunts des entreprises non financières et du gouvernement fédéral.
- La diminution du financement obtenu par les entreprises non financières s'est produite en dépit de la stabilité des dépenses d'investissement et de la baisse des profits. Elle concorde cependant avec l'importance réduite des prises de contrôle par les sociétés canadiennes et le ralentissement de l'accumulation d'actifs financiers par rapport au premier semestre de 1989. Si les entreprises ont accru leur recours aux instruments à court terme tels que le papier commercial et les acceptations bancaires, elles ont enregistré un fort recul au chapitre des prêts commerciaux de même qu'une certaine diminution de leurs émissions de titres à long terme.
- À la faveur de la hausse des impôts et de la diminution des besoins de financement relatifs aux opérations de change, l'administration fédérale a pu réduire ses emprunts d'environ 7,2 milliards de dollars par rapport au premier semestre de 1989. L'augmentation des émissions d'obligations négociables et la réduction des remboursements d'obligations d'épargne ont ainsi permis une forte baisse des émissions de bons du Trésor. Les besoins d'emprunt des administrations provinciales et municipales sont demeurés stables, la hausse des crédits à court terme ayant compensé la baisse des émissions d'obligations.
- En dépit d'une certaine faiblesse de l'activité sur le marché de l'immobilier, la demande de prêts hypothécaires est restée ferme par rapport au premier semestre de 1989, traduisant surtout la vigueur soutenue des mises en chantier de logements. Les données préliminaires du troisième trimestre indiquent cependant un ralentissement marqué de la progression des crédits hypothécaires. Le financement obtenu sous forme de prêts à la consommation a légèrement baissé. Cette baisse est compatible avec les niveaux élevés des taux d'intérêt et du fardeau de la dette par rapport au revenu personnel disponible.
- La proportion des émissions de titres dans le financement total a diminué pour se situer à un niveau à peu près équivalent à celui du financement obtenu auprès des institutions financières canadiennes. Par rapport au premier semestre de 1989, une proportion plus importante de l'ensemble du financement provenait d'émissions de titres sur les marchés étrangers.
- Par suite d'une diminution des prêts consortiaux de banques étrangères, le financement octroyé par les non-résidents a baissé pour se situer à environ la moitié du niveau enregistré au premier semestre de 1989.

| Total   | 90.2                | 109.5 | 119.0                   | 130.8 | 67.6 | 63.2 | 51.4 |   |

These are principally mortgages secured by residential property. The figures include the net new issues of mortgage-backed securities. The figures exclude net mortgage lending by governments and their agencies, which is reflected in the financing requirements of the respective governments.

(2) Loans from the Government of Canada are excluded.

(3) Excludes temporary swap transactions between the Bank of Canada and the Exchange Fund Account. The figures shown are not a measure of Government of Canada cash requirements.

(4) Includes net new issues of governments, non-financial businesses and mortgage-backed securities.

(5) Includes Euro-Canadian issues and U.S.-pay Canada Bills.

(6) Excludes retained earnings of foreign-owned enterprises.

(7) Life insurance companies and pension funds.

(8) Includes Canada Pension Plan and Quebec Pension Plan.

(1) Il s'agit principalement de prêts hypothécaires à l'habitation. Les chiffres englobent les nouvelles émissions nettes de titres garantis par des créances hypothécaires. Les chiffres excluent le montant net des prêts hypothécaires consentis par les gouvernements à leurs agences, lequel figure dans les besoins de financement des administrations intéressées.

(2) Les emprunts obtenus du gouvernement canadien en sont exclus.

(3) Non compris les opérations de swap entre la Banque du Canada et le Fonds des changes. Ces chiffres ne constituent pas des indicateurs des besoins de trésorerie du gouvernement canadien.

(4) Comprend le montant des émissions nettes des gouvernements, des entreprises non financières et titres hypothécaires.

(5) Y compris les émissions en monnaie canadienne et en dollars du Canada libellées en dollars F.o.b.

(6) Non compris les bénéfices non répartis des entreprises appartenant à des non-résidents.

(7) Les compagnies d'assurance-vie et les caisses de retraite.

(8) Y compris le Régime de pensions du Canada et le Régime de rentes du Québec.

| Net increase in loans from banks <sup>(7)</sup>                            |  | 218                 | 127          | 86                     | 211          | 60           | 151          |
| Government of Canada (including CMHC)                                      |  | —109                | 30           | 28                     | 7            | 83           | 90           |
| Increase in treasury bills and short-term paper outstanding <sup>(8)</sup> |  | 2,525               | 1,503        | 1,192                  | 1,644        | 839          | 805          |
| Total <sup>(9)</sup>   |  | 19,322              | 12,192       | 9,412                  | 13,378       | 7,433        | 5,944        |

Note: To obtain a total of combined federal, provincial and municipal financing without double counting, loans from the Government of Canada to the provinces and municipalities shown above would have to be eliminated, as well as changes in provincial and municipal holdings of Government of Canada securities.

(1) Foreign currency issues are converted to Canadian dollars at the average noon exchange rate during the month in which the funds were raised.

(2) This item includes transactions involving term loans; U.S. dollar securities include Canada Bills.

(3) Actual drawings and repayments are denominated in U.S. dollars. The amounts shown are converted to Canadian dollars at the average noon exchange rate during the month in which the funds were drawn or repaid. Owing to fluctuations in the exchange value of the Canadian dollar, drawings and repayments of equivalent U.S. dollar amounts will not necessarily net to zero.

(4) Excludes changes in cash balances resulting from temporary swap transactions between the Bank of Canada and the Exchange Fund Account.

(5) Includes government enterprises.

(6) Includes provincial savings bonds and purchases of provincial and municipal securities with Quebec Pension Plan funds.

(7) Includes loans from foreign banks located abroad and from Canadian chartered banks.

(8) This item has been revised to include certain provinces and municipalities not previously covered by the survey and also provincial treasury bills and paper sold directly to banks, previously classified as bank loans.

(9) To the extent that it has not been possible to identify purchases for provincial government accounts of provincial or municipal securities, the total of provincial and municipal financing is overstated.

Nota : Pour établir le montant net, c'est-à-dire sans double emploi, du financement obtenu par l'ensemble du secteur public, il faudrait éliminer des données ci-dessus les prêts du gouvernement canadien aux provinces et aux municipalités, ainsi que les variations des portefeuilles des provinces et des municipalités en titres du gouvernement canadien.

(1) Le montant des émissions en monnaies étrangères est converti en dollars canadiens au taux de change moyen à midi pour le mois au cours duquel les fonds ont été empruntés.

(2) Ce poste tient compte des opérations donnant lieu à des emprunts à terme; les titres en dollars É.-U. comprennent les bons du Canada.

(3) Les tirages et les remboursements effectués sont exprimés en dollars É.-U. Les montants indiqués sont convertis en dollars canadiens au taux de change moyen à midi pour le mois au cours duquel les fonds ont été tirés ou remboursés. À cause des variations du cours du dollar canadien, la différence entre les tirages et les remboursements auxquels donnent lieu des emprunts de même montant libellés en dollars É.-U. n'est pas nécessairement nulle.

(4) Non compris les variations des dépôts consécutives aux opérations temporaires de swap conclues entre la Banque du Canada et le Fonds des changes.

(5) Y compris les entreprises publiques

(6) Y compris les obligations d'épargne des provinces et les titres des provinces et des municipalités achetées avec des fonds du Régime de rentes du Québec

(7) Comprend les prêts des banques à charte canadiennes et des banques étrangères établies à l'étranger.

(8) Cette rubrique a été modifiée de façon à inclure certaines provinces et municipalités qui n'étaient pas couvertes jusqu'ici par notre enquête ainsi que les bons du Trésor et le papier vendus directement aux banques par les provinces et qui étaient auparavant compris dans les prêts bancaires.

(9) Ce chiffre total est surestimé, dans la mesure où il n'a pas été possible de repérer les acquisitions de titres des provinces et des municipalités effectuées pour des comptes provinciaux.

(1) These data include loans made by bank mortgage subsidiaries.

(2) Beginning in 1986, data for real estate investment trusts are included with trust and mortgage loan companies.

(3) Includes credit extended by department stores.

(4) Includes loans from investment funds, property and casualty insurance companies, the Federal Business Development Bank and, before 1986, real estate investment trusts.

(5) Includes net new issues of governments, non-financial businesses and mortgage-backed securities.

(6) Includes net new issues of governments and non-financial businesses.

(7) Includes Euro-Canadian issues, term loans and U.S.-pay Canada Bills.

(8) Includes Euro-Canadian issues.

(9) Excludes retained earnings of foreign-owned enterprises.

(10) Includes Quebec Pension Plan.

(11) Includes both foreign currency and Canadian dollar securities acquired by non-residents, direct investment from abroad, and syndicated loans from foreign banks located abroad.

(1) Ces données comprennent les prêts octroyés par les filiales hypothécaires des banques.

(2) À partir de 1986, les chiffres relatifs aux sociétés fiduciaires de placement immobilier sont combinés avec ceux des sociétés de fiducie ou de prêt hypothécaire.

(3) Comprend le crédit octroyé par les grands magasins.

(4) Comprend les fonds de placement, les sociétés d'assurance-vie et d'assurance contre des risques divers, la Banque fédérale de développement et, avant 1986, les sociétés fiduciaires de placement immobilier.

(5) Comprend le montant des émissions nettes des gouvernements, des entreprises non financières et titres hypothécaires.

(6) Comprend le montant des émissions nettes des gouvernements et des entreprises non financières.

(7) Y compris les émissions en euros-dollars canadiens, les prêts à terme et les bons du Canada libellés en dollars E.-U.

(8) Y compris les émissions en euros-dollars canadiens.

(9) Non compris les bénéfices non répartis des entreprises appartenant à des non-résidents.

(10) Y compris le Régime de rentes du Québec.

(11) Y compris les titres en monnaies étrangères et en dollars canadiens achetés par les non-résidents, les investissements directs des non-résidents et les prêts consortiaux de banques étrangères établies à l'étranger.

## Symbols used in charts and tables

A arithmetic scale  
 L logarithmic scale  
 E estimated  
 P preliminary  
 R revised  
 N not available  
 C corrected

Owing to the rounding of figures, components may not always add to the totals shown. A horizontal rule in the body of the table indicates either a break in the series or that the earlier figures are available only at a more aggregated level.

## Abreviations utilisées dans les graphiques et les tableaux

A Échelle arithmétique  
 L Ordonnées logarithmiques  
 E Estimations  
 P Chiffres provisoires  
 R Chiffres révisés  
 N Chiffres non disponibles  
 C Chiffres corrigés

Or, étant que les chiffres sont arrondis, l'addition des éléments d'un tableau ne correspond pas toujours exactement au total indiqué. Une ligne horizontale dans le corps d'un tableau indique soit qu'il y a une rupture dans une série, soit que les données des périodes antérieures n'existent que sous une forme plus agrégée.
